

SUMMERS PORTFOLIO!

Context

- The planning
- The style and design process
- A walkthrough of the website
- The ~~final~~ review

The Plan

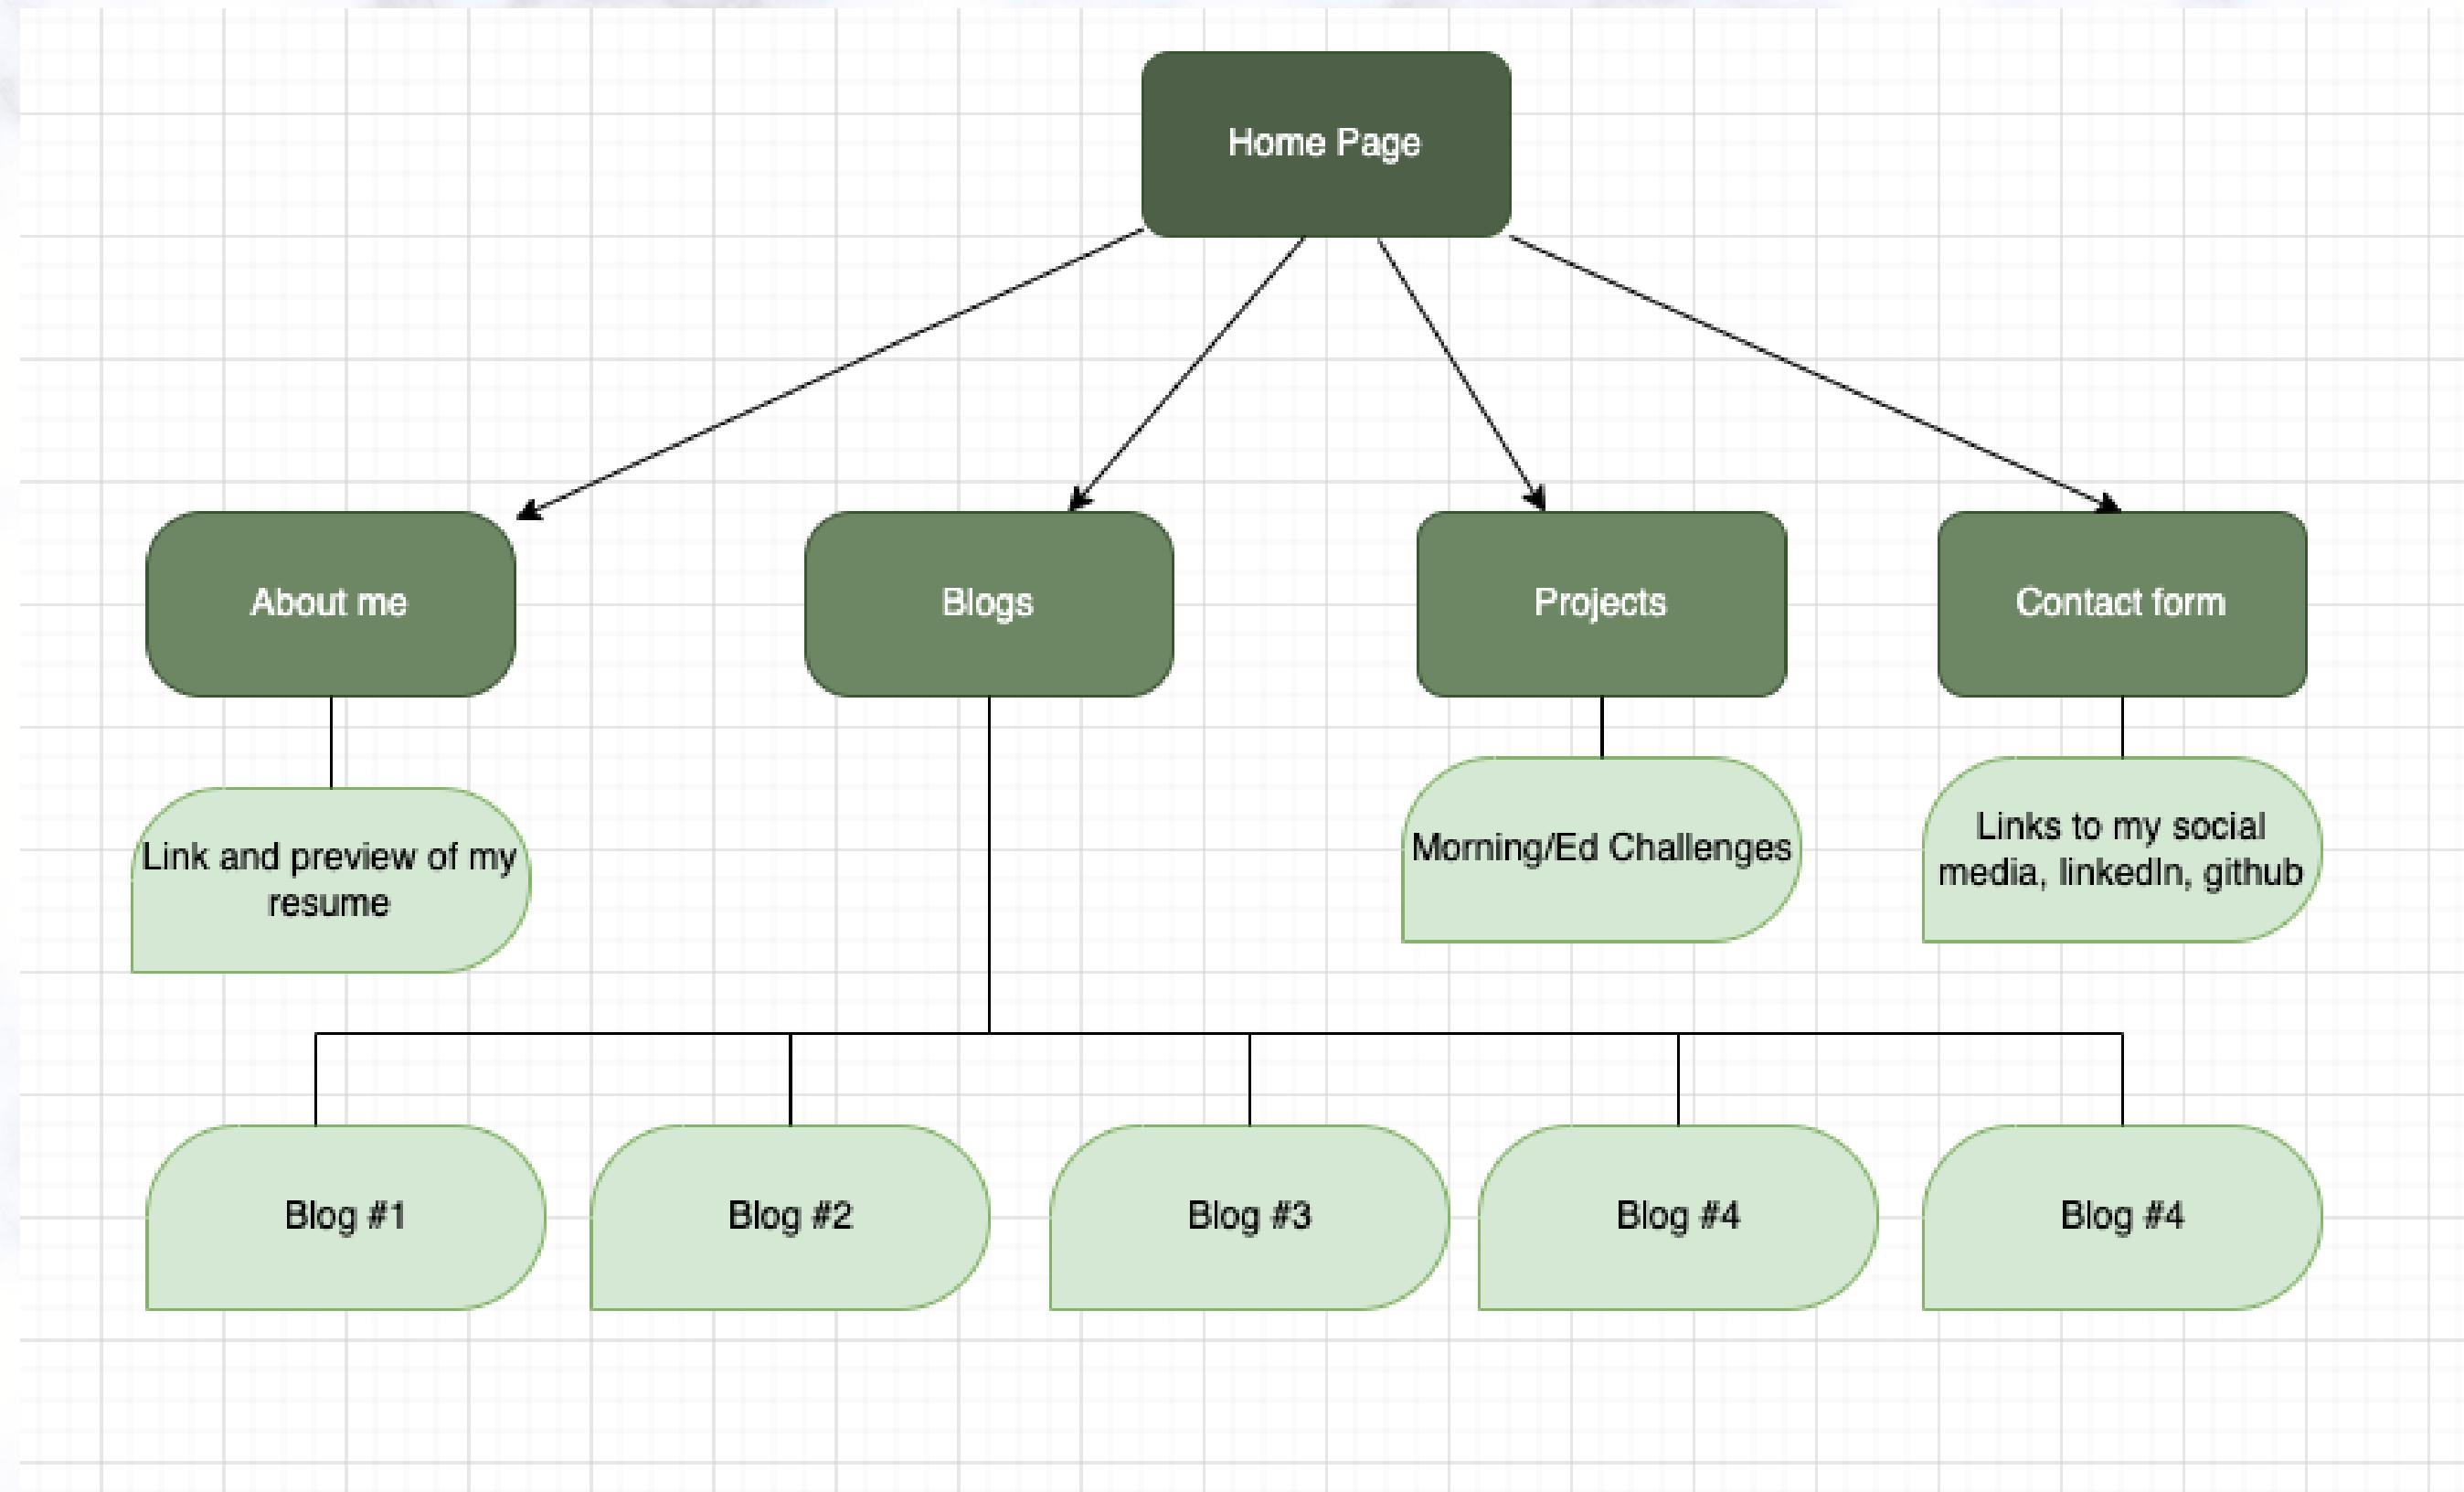

first we must plan the website and build a layout requiring the basic components and formats within HTML/CSS.

I used:

- A Sitemap that maps my whole directory in the website
 - Wireframes for my layout and design
- Trello board to help organise my plans and building the process to completion.

The Plan: Sitemap

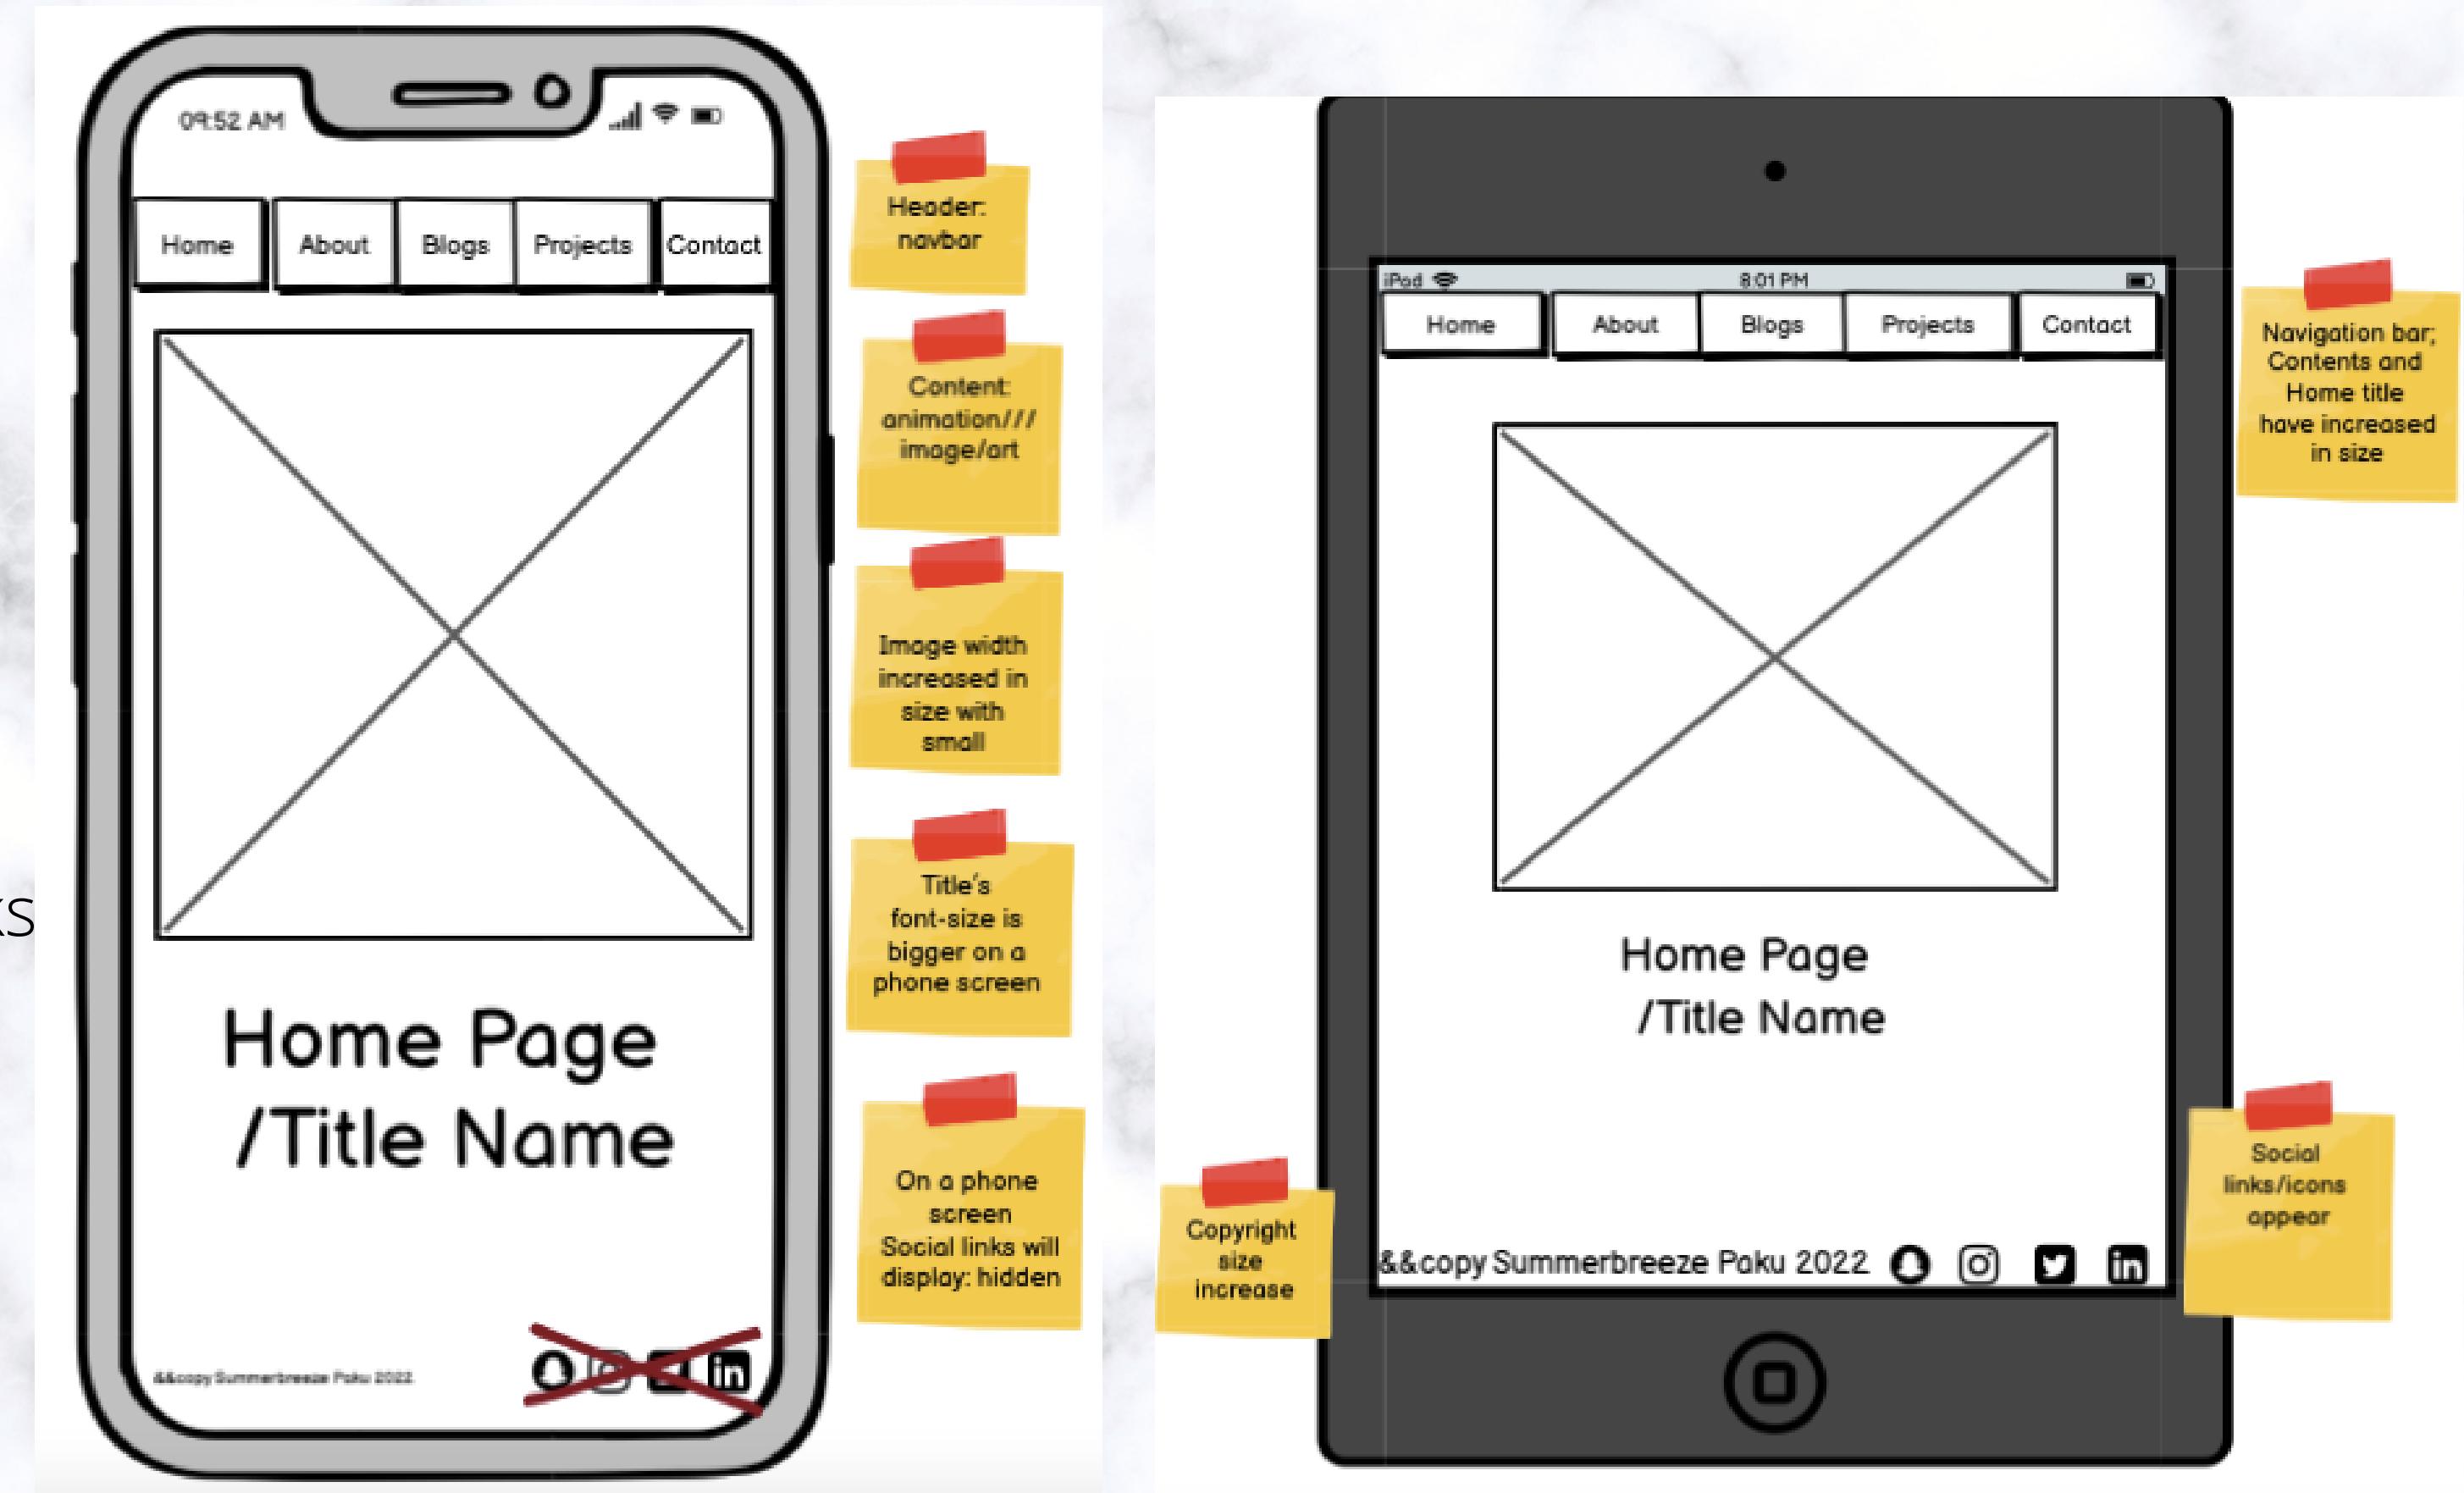

It all started with a sitemap

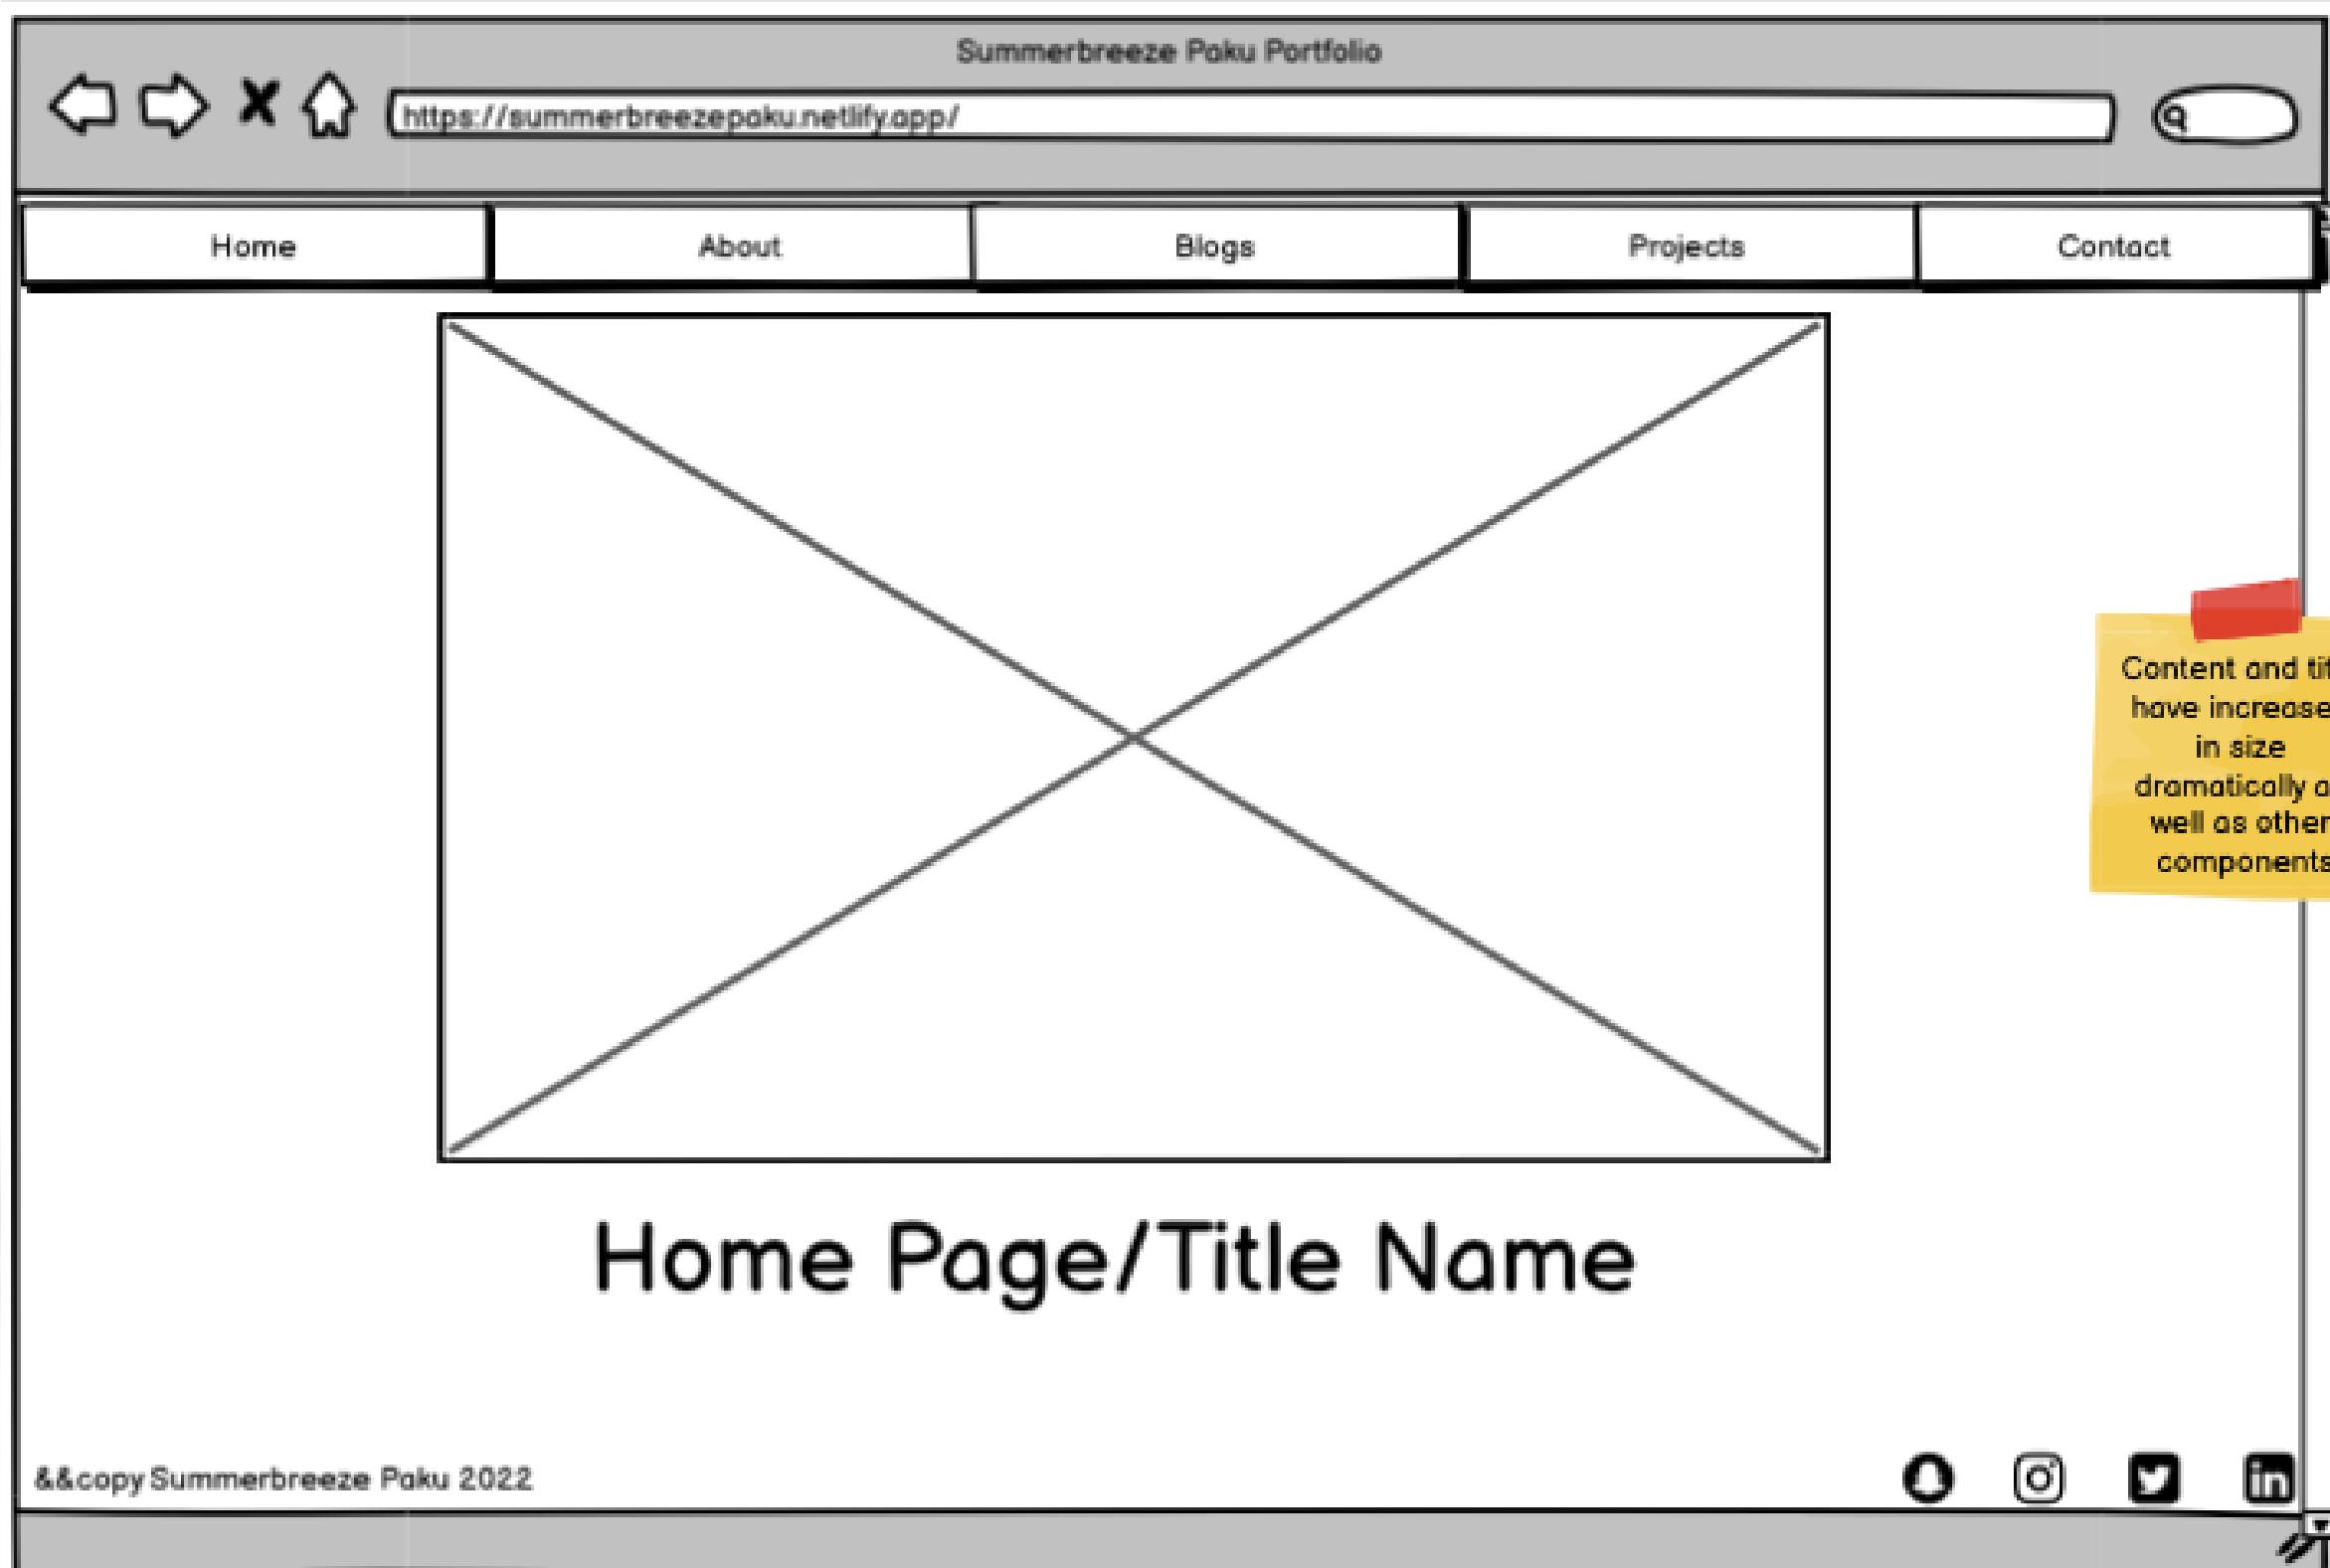

The Plan: Wireframes

Components I used:

- Navigation Bar
- Title for the page
- Content/image
- Footer containing copyright label,
- And social icon links
- Background image

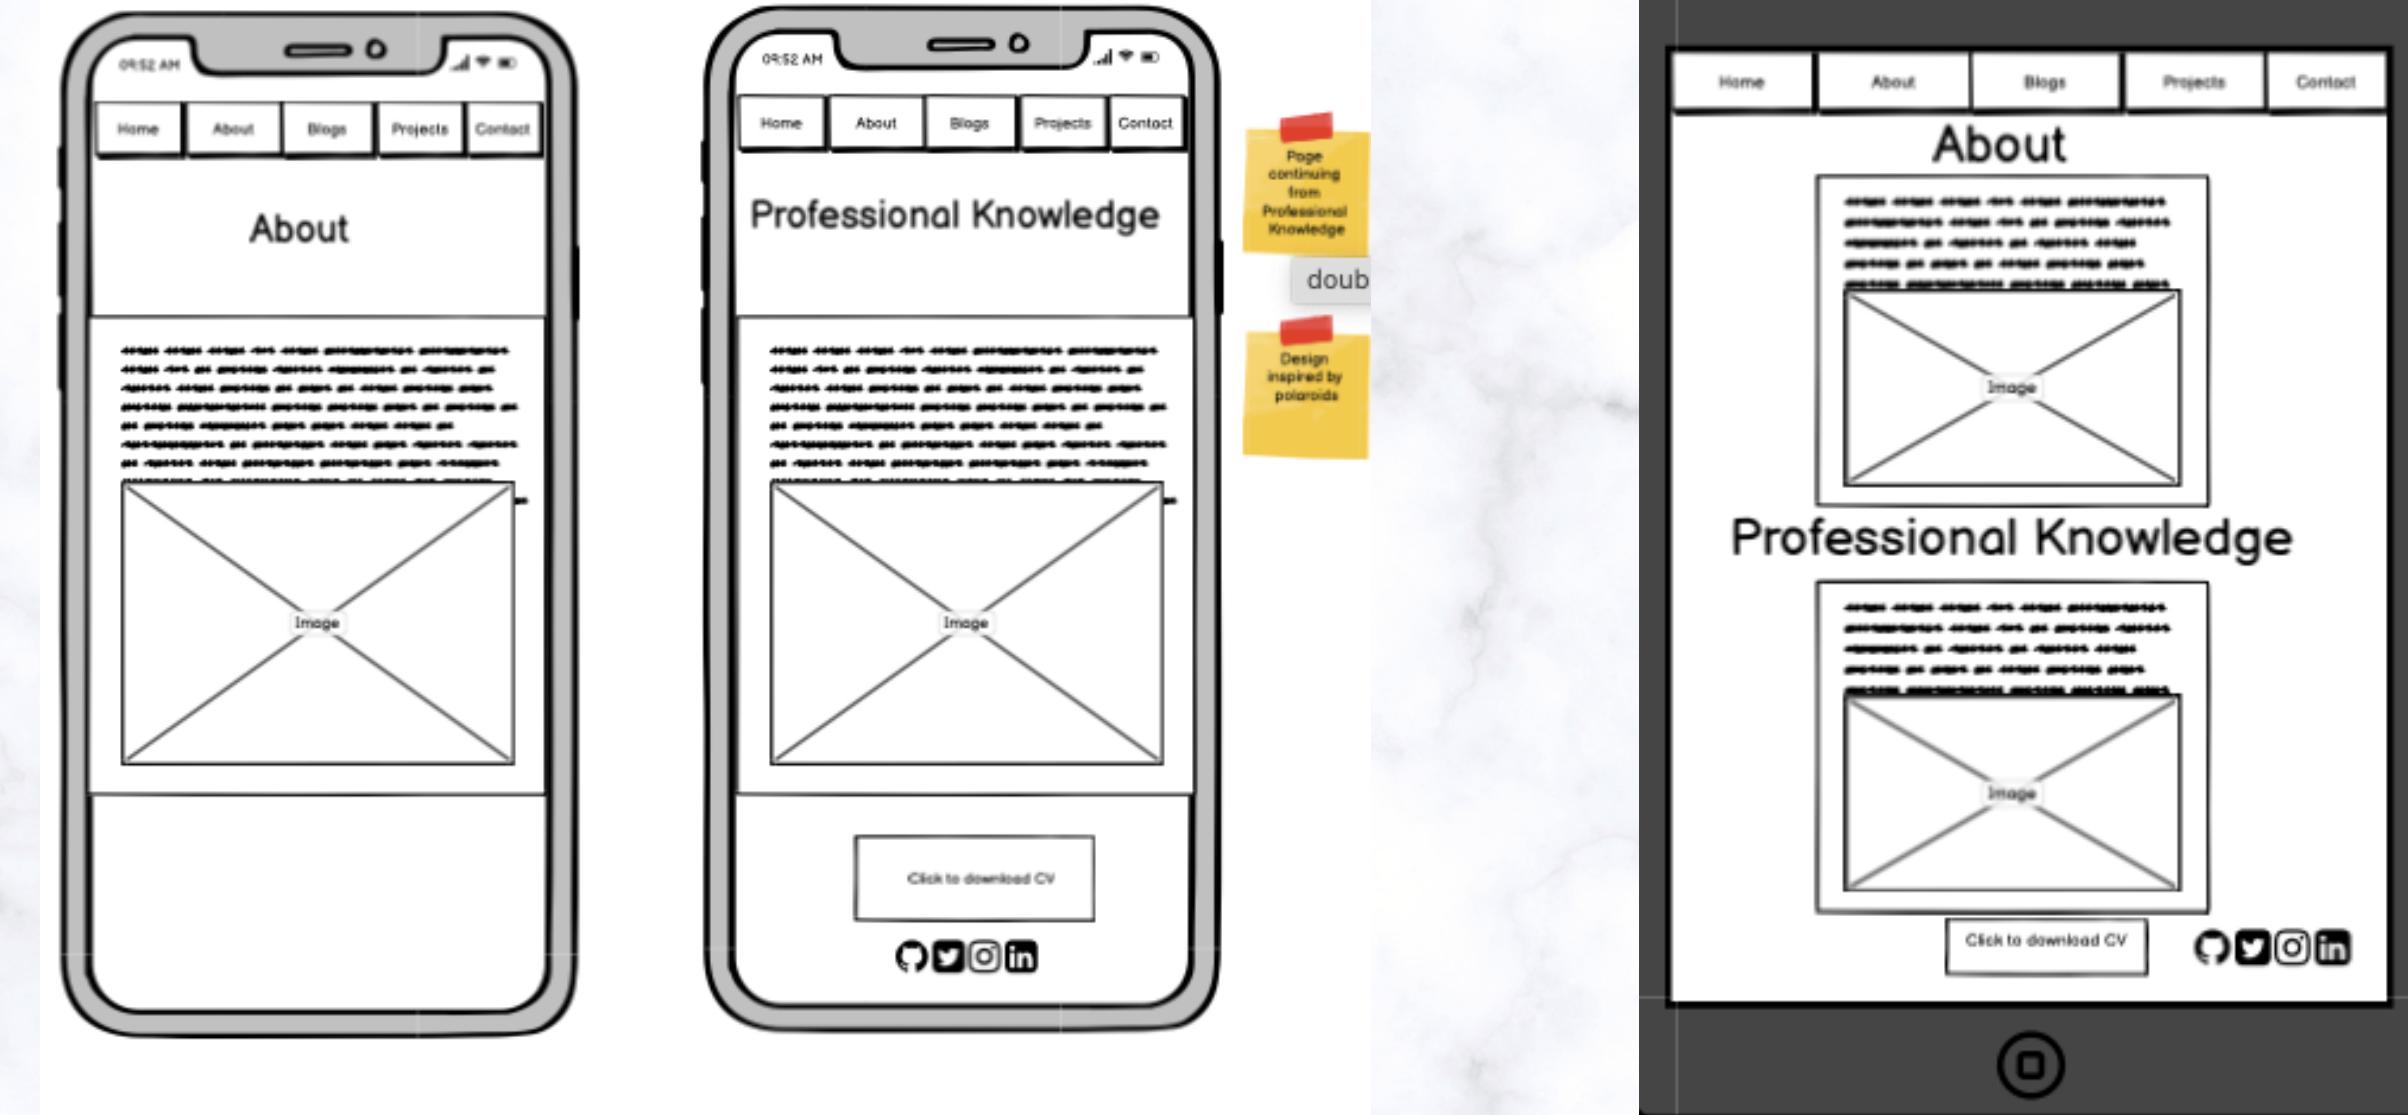

The Plan: Wireframes

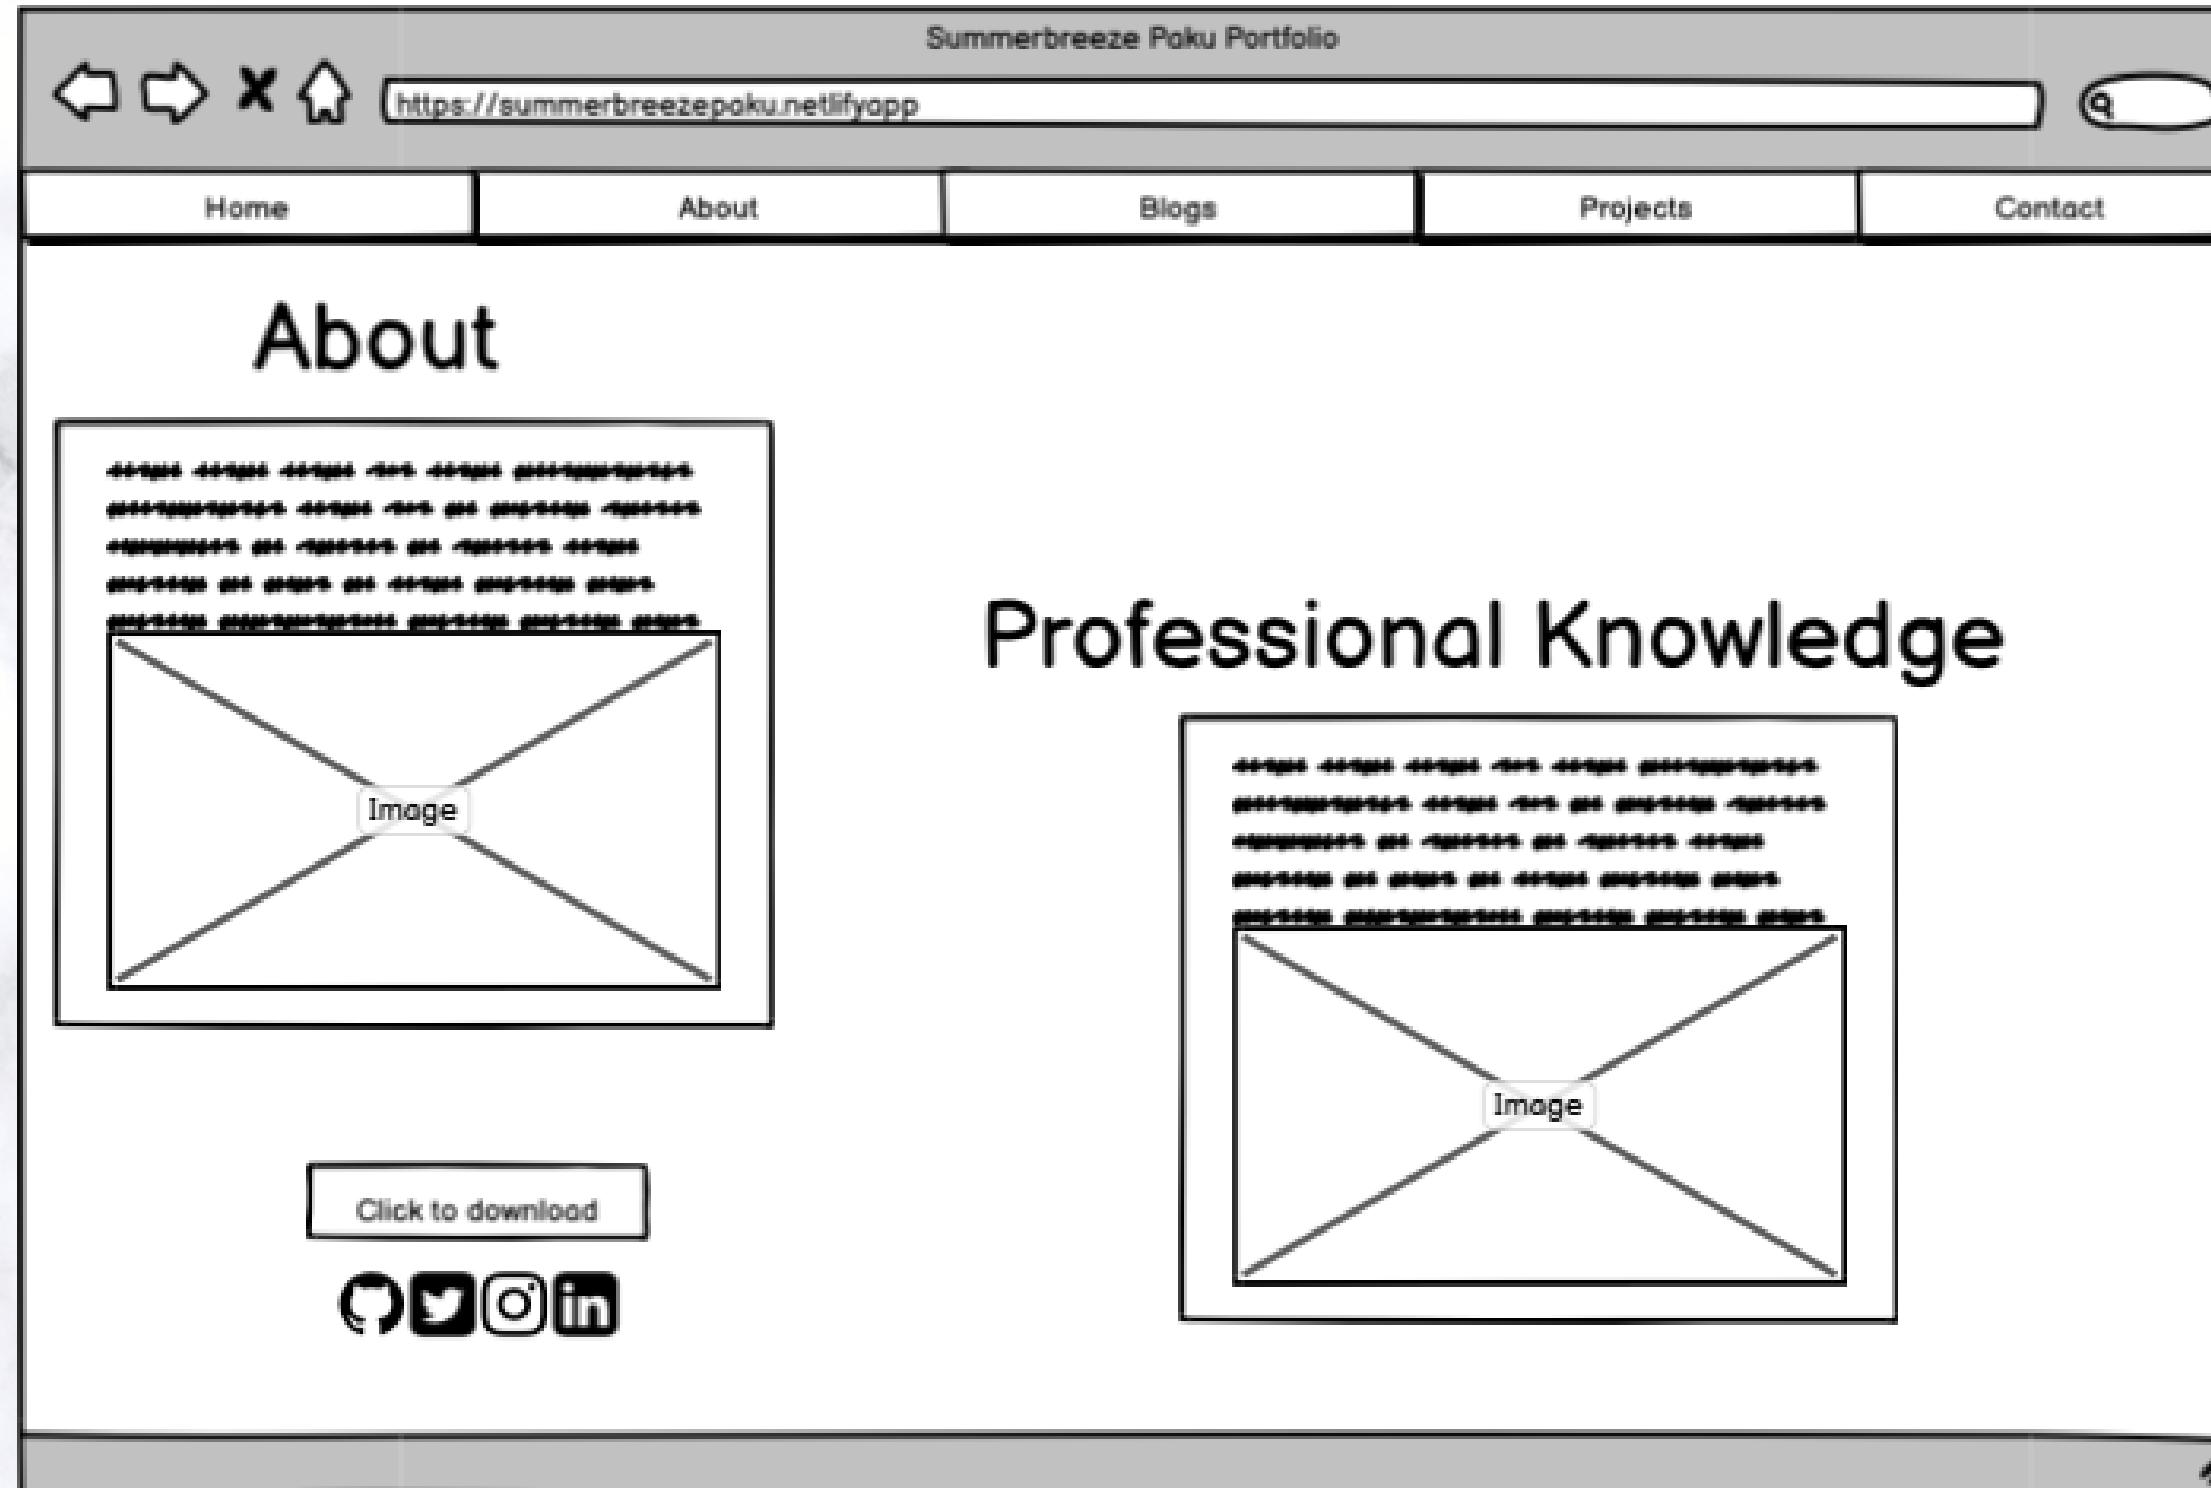

The Plan: Wireframes

Components I used:

- Navigation Bar
- Title for the page
- sub heading
- cards to hold text and
- images
- download button
- social icon links
- background image

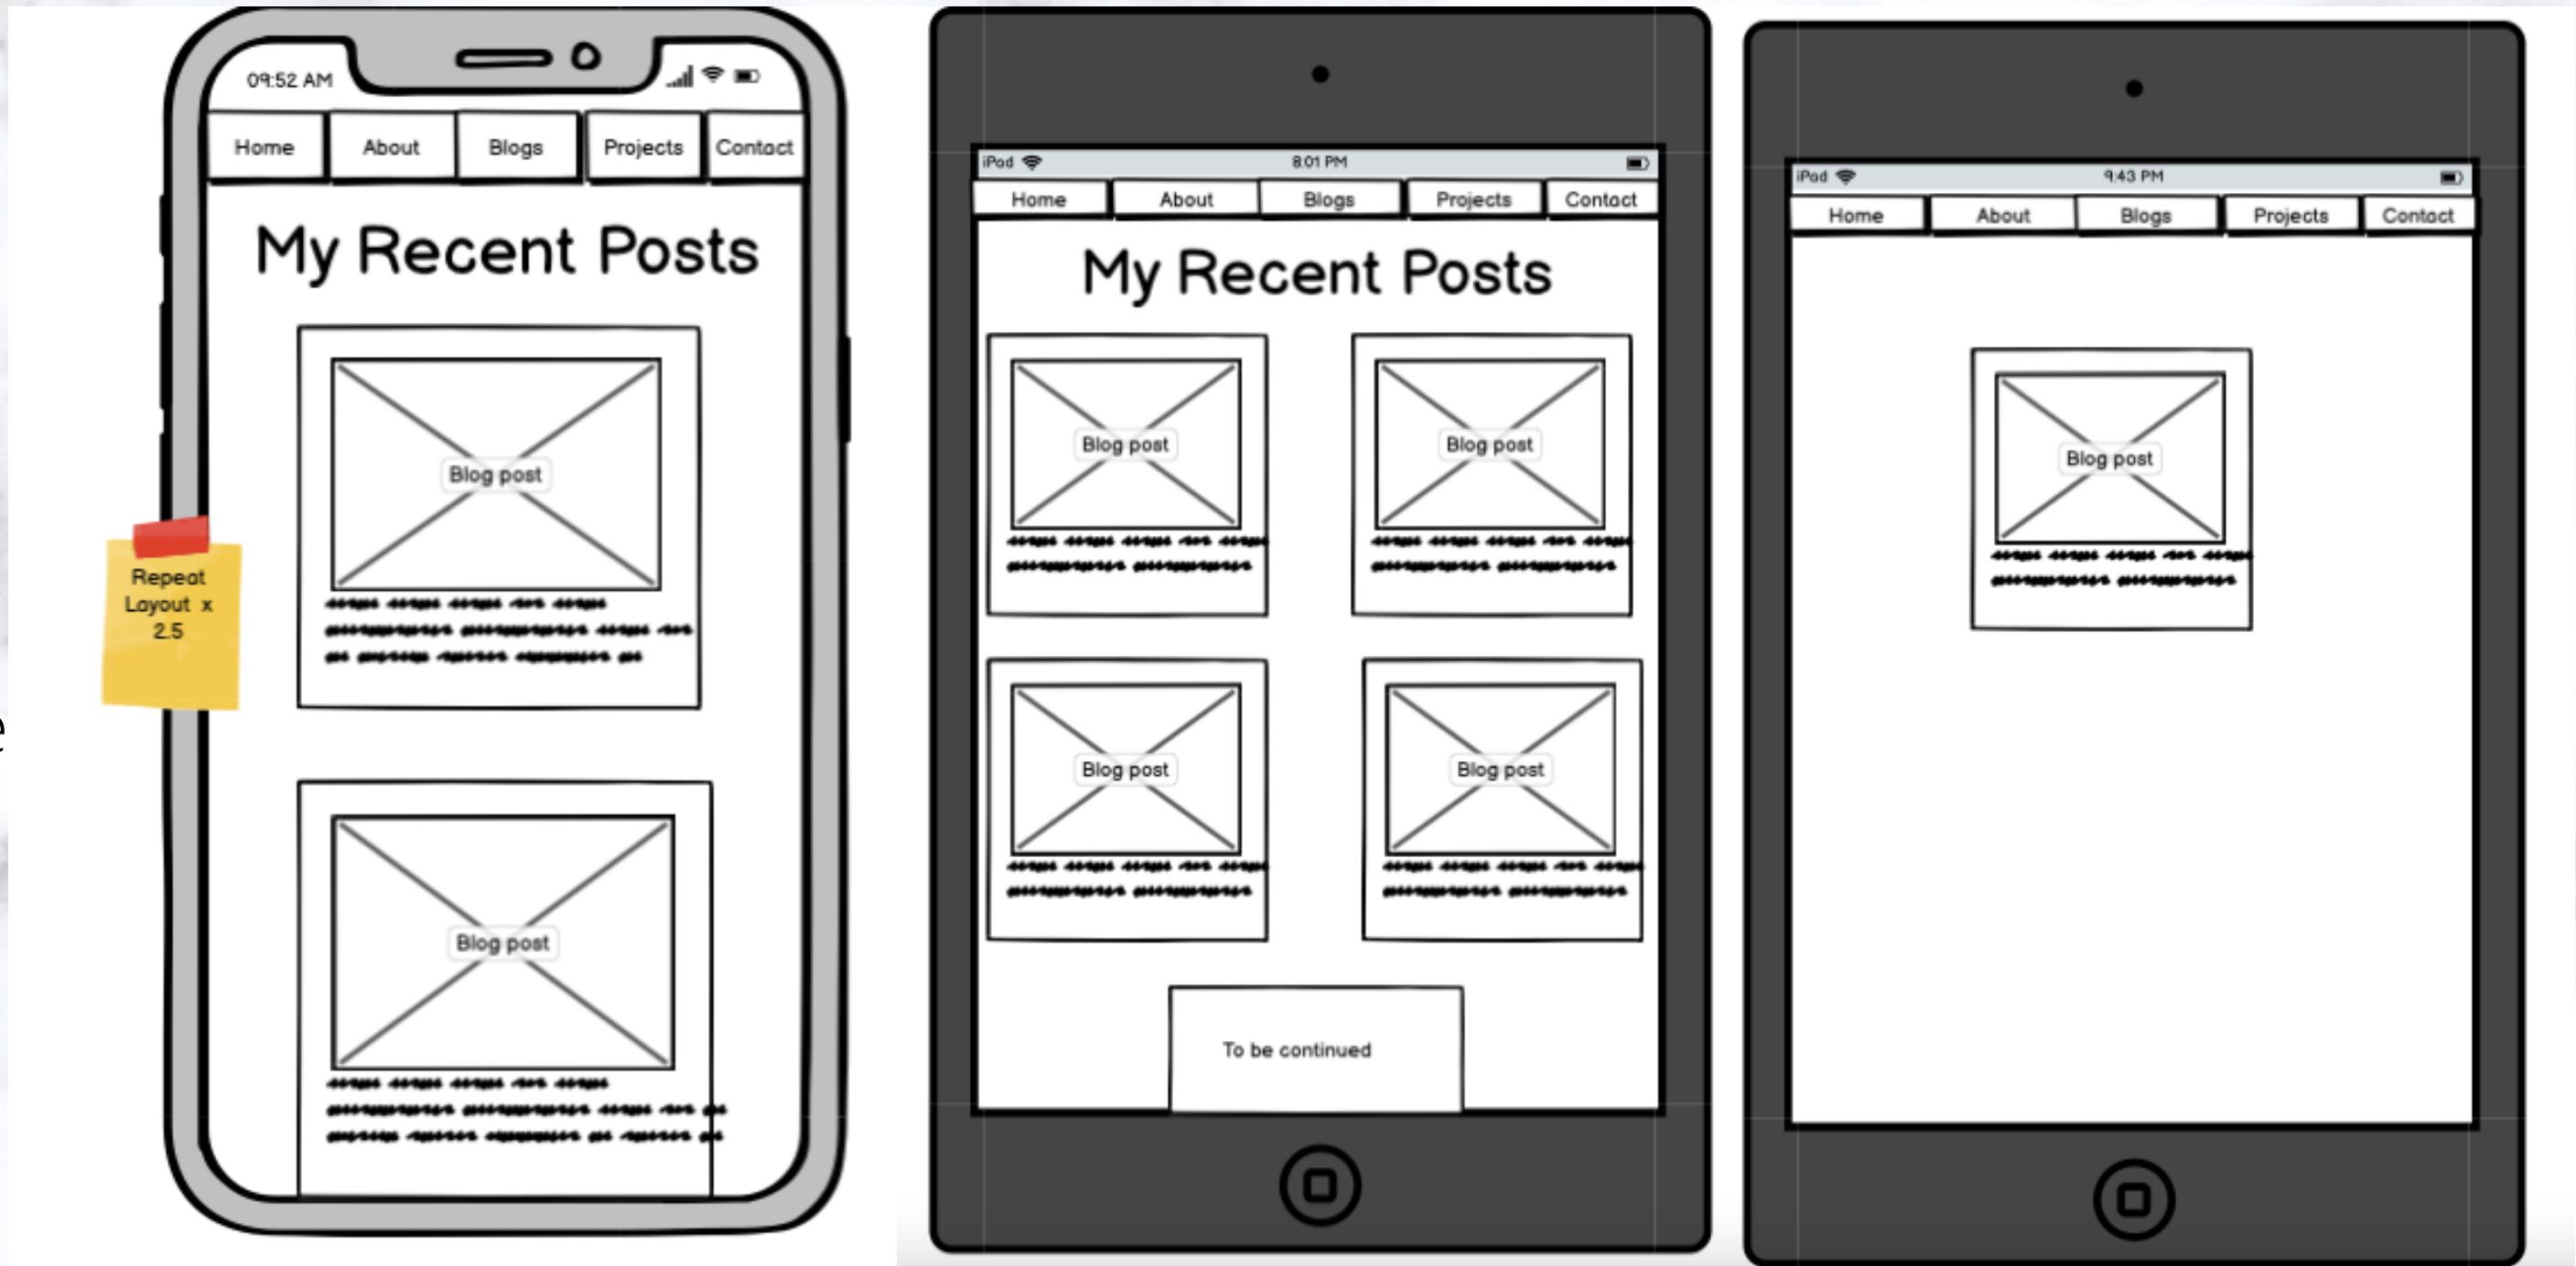

The Plan: Wireframes

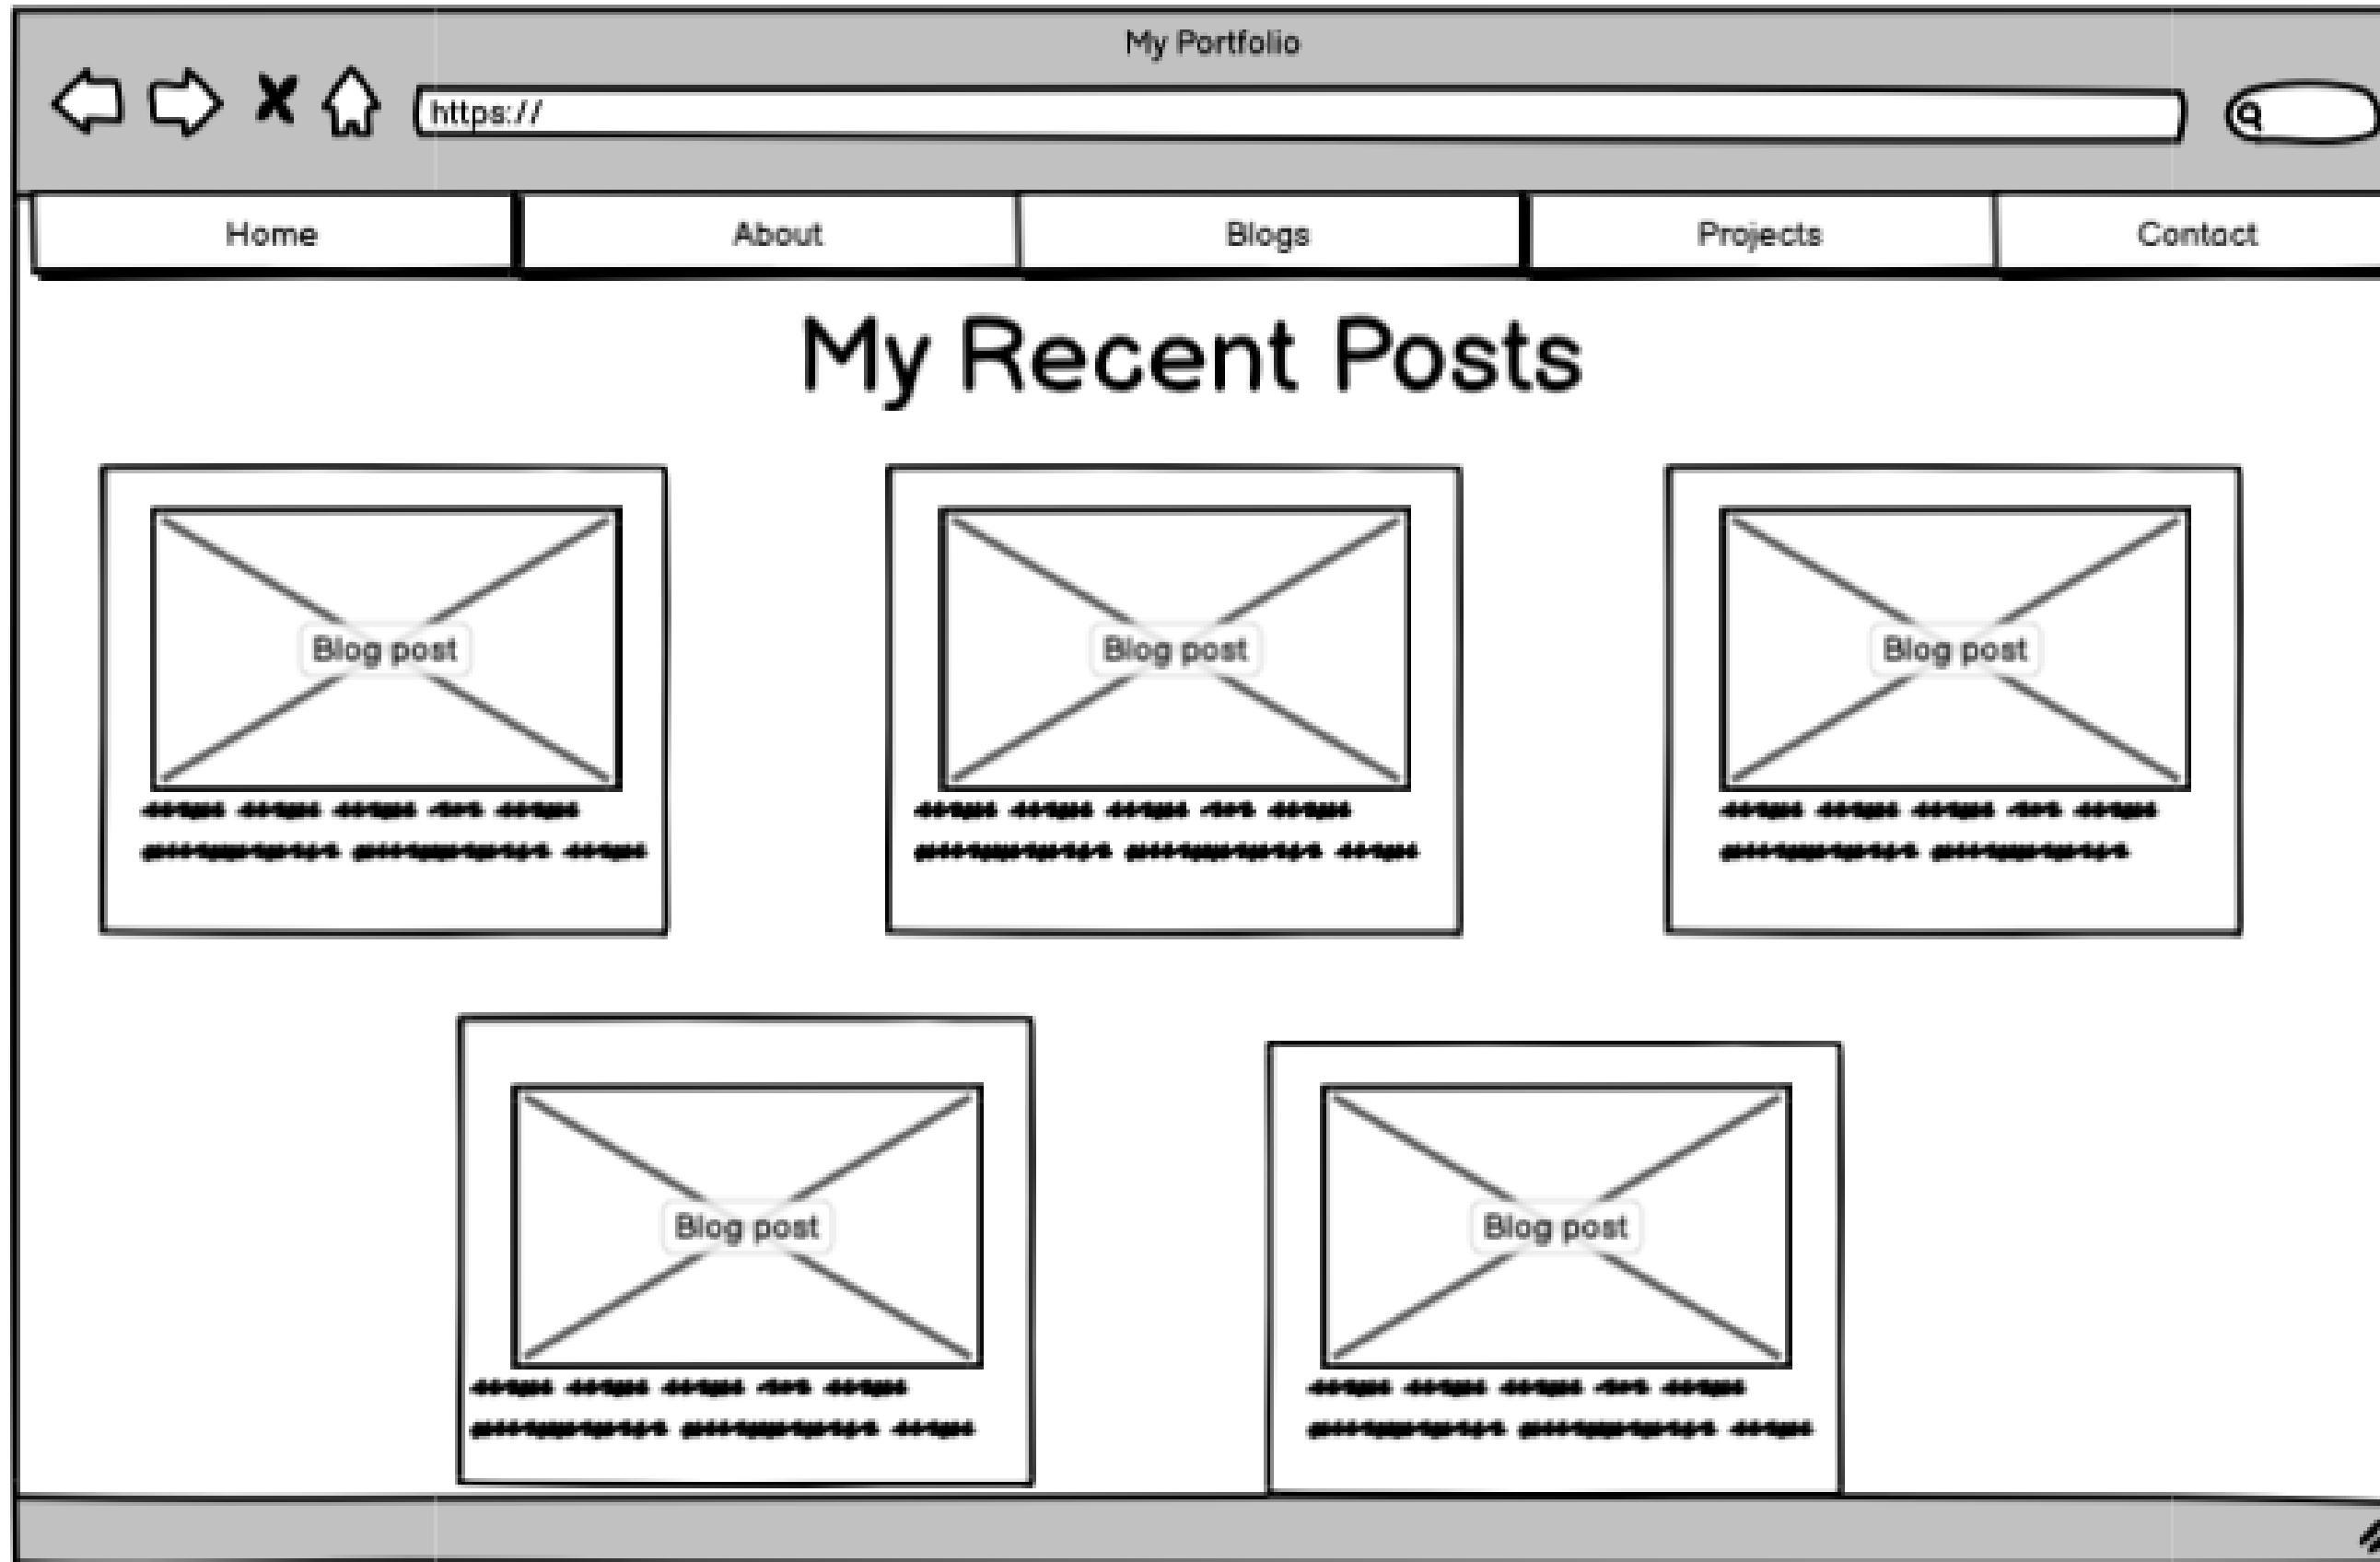

The Plan: Wireframes

Components I used:

- Navigation Bar
- Title for the page
- 5 cards that contain
- description/date/title
- 5 images
- and a read more hyperlink
- copyright label
- background image

The Plan: Wireframes

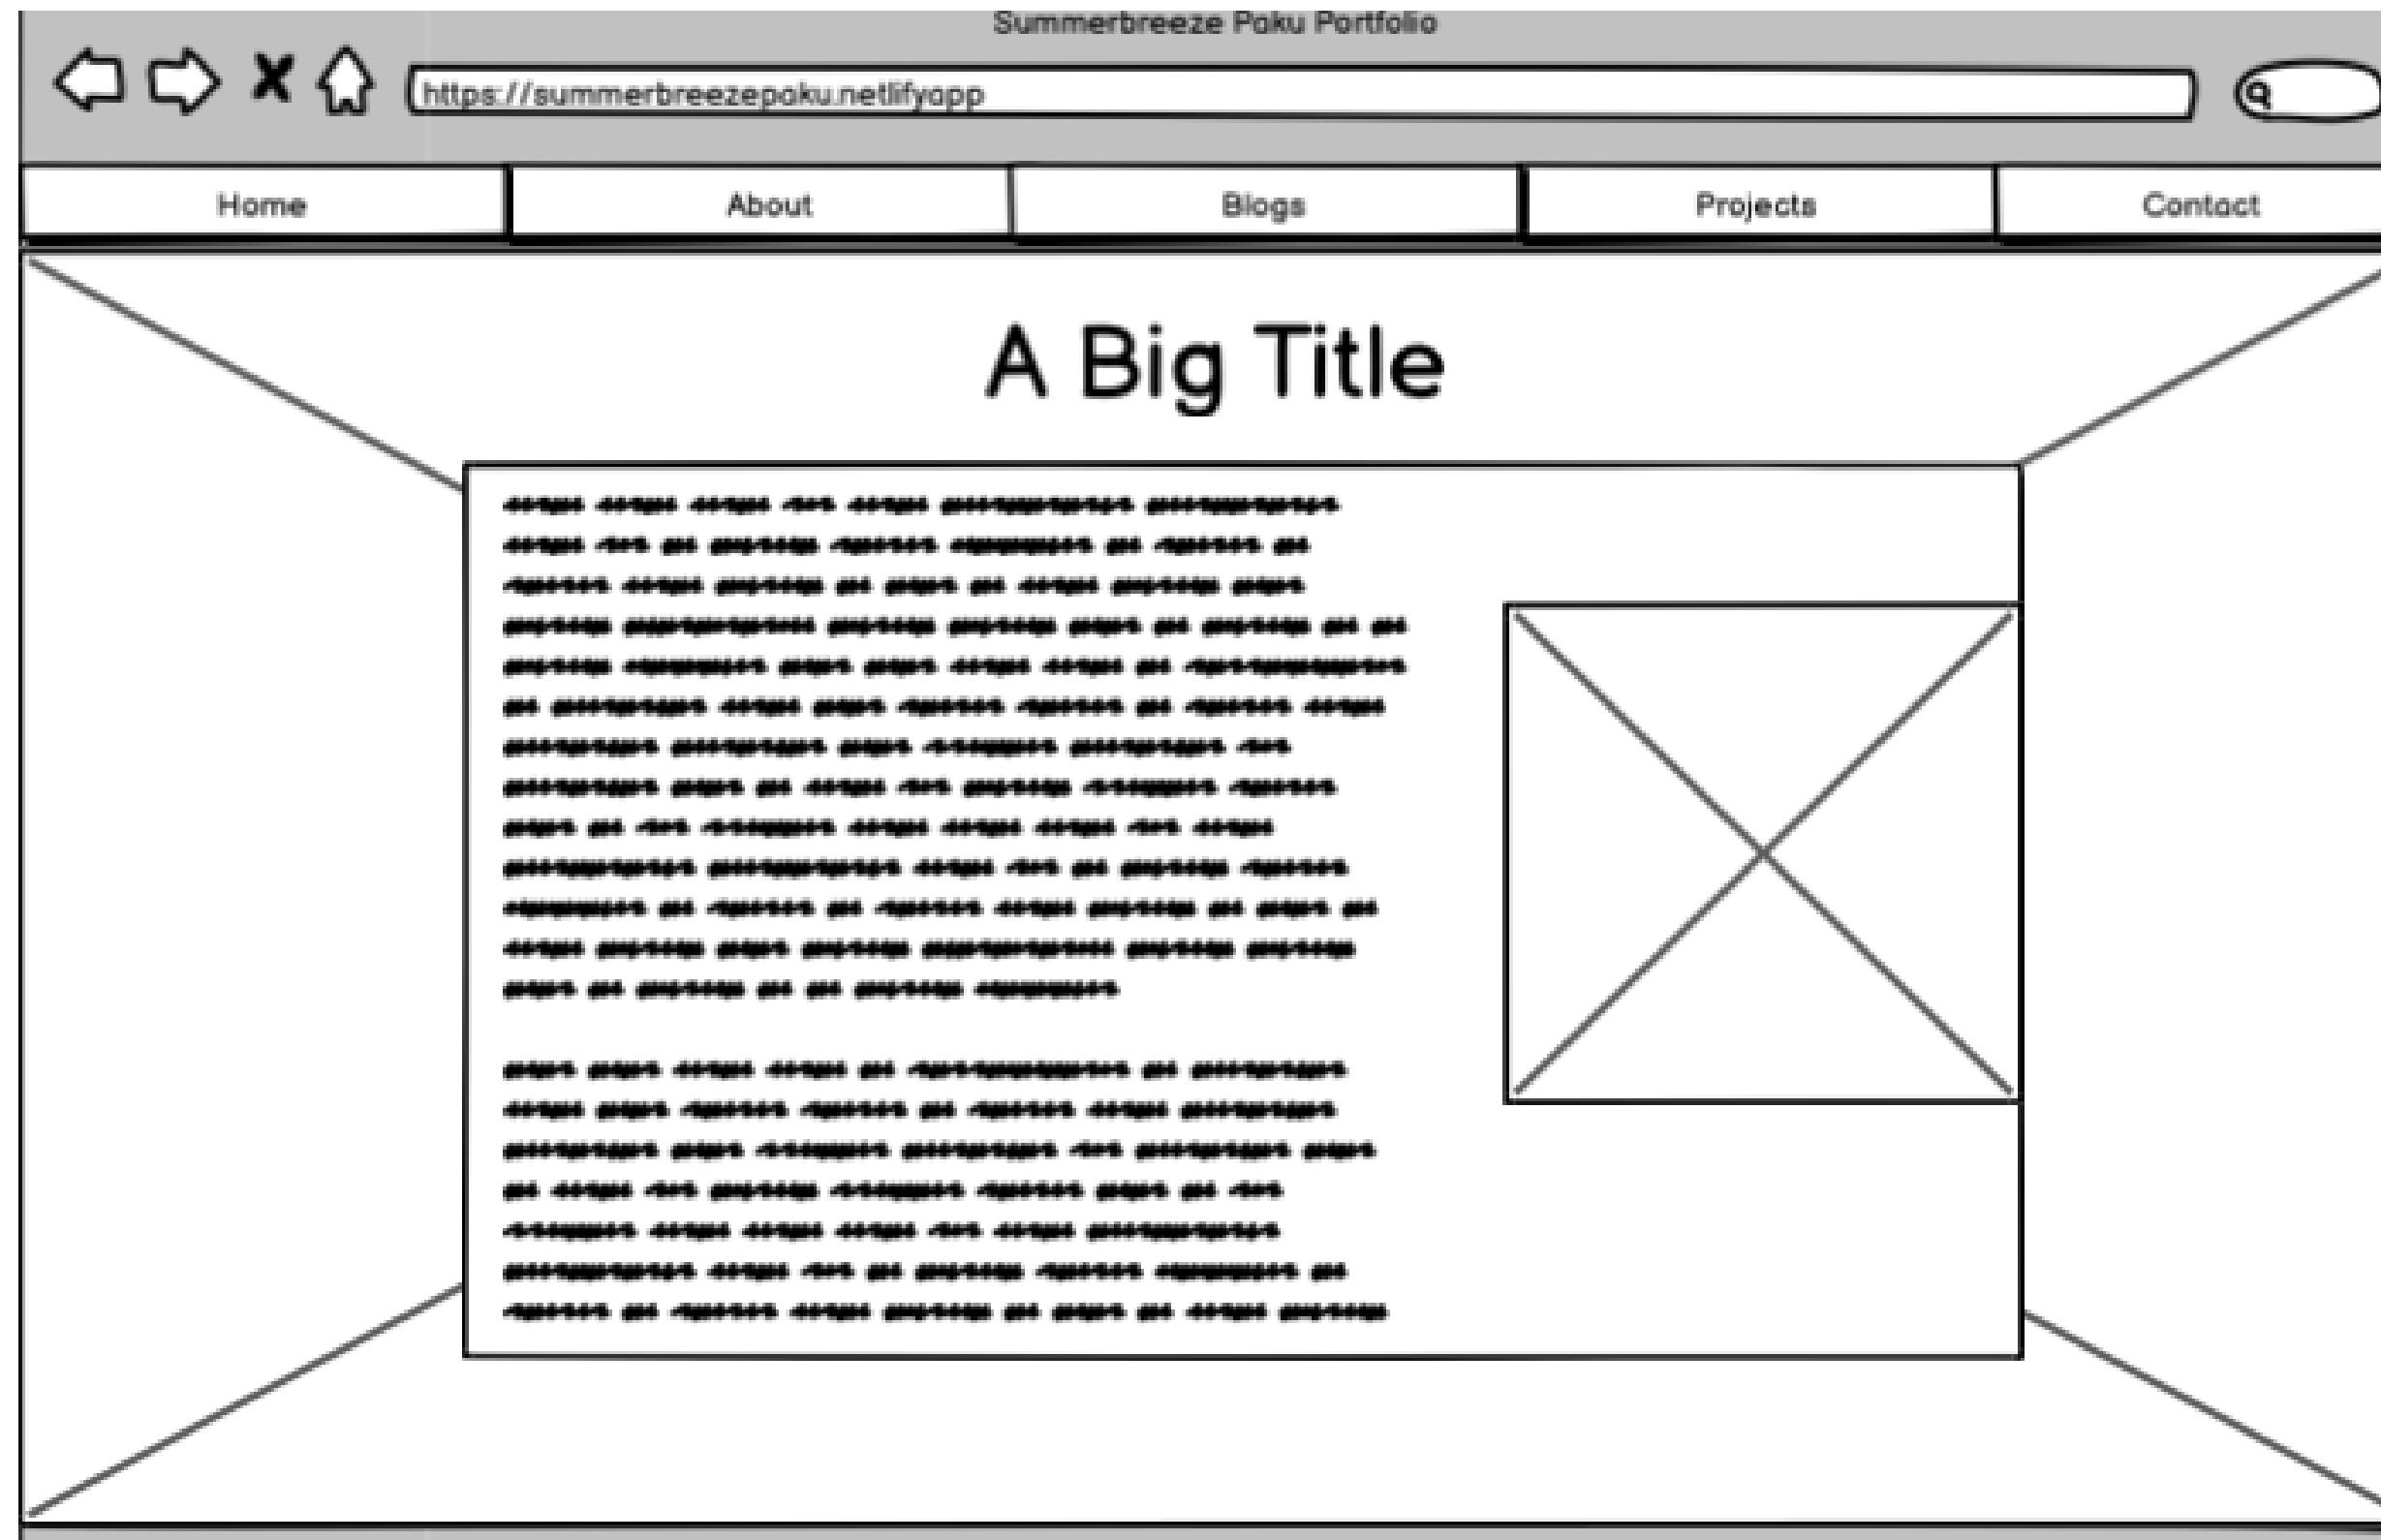

The Plan: Wireframes

Components I used:

- Navigation Bar
- Title for the blog post
- container/card to fit
- image and
- text
- background image

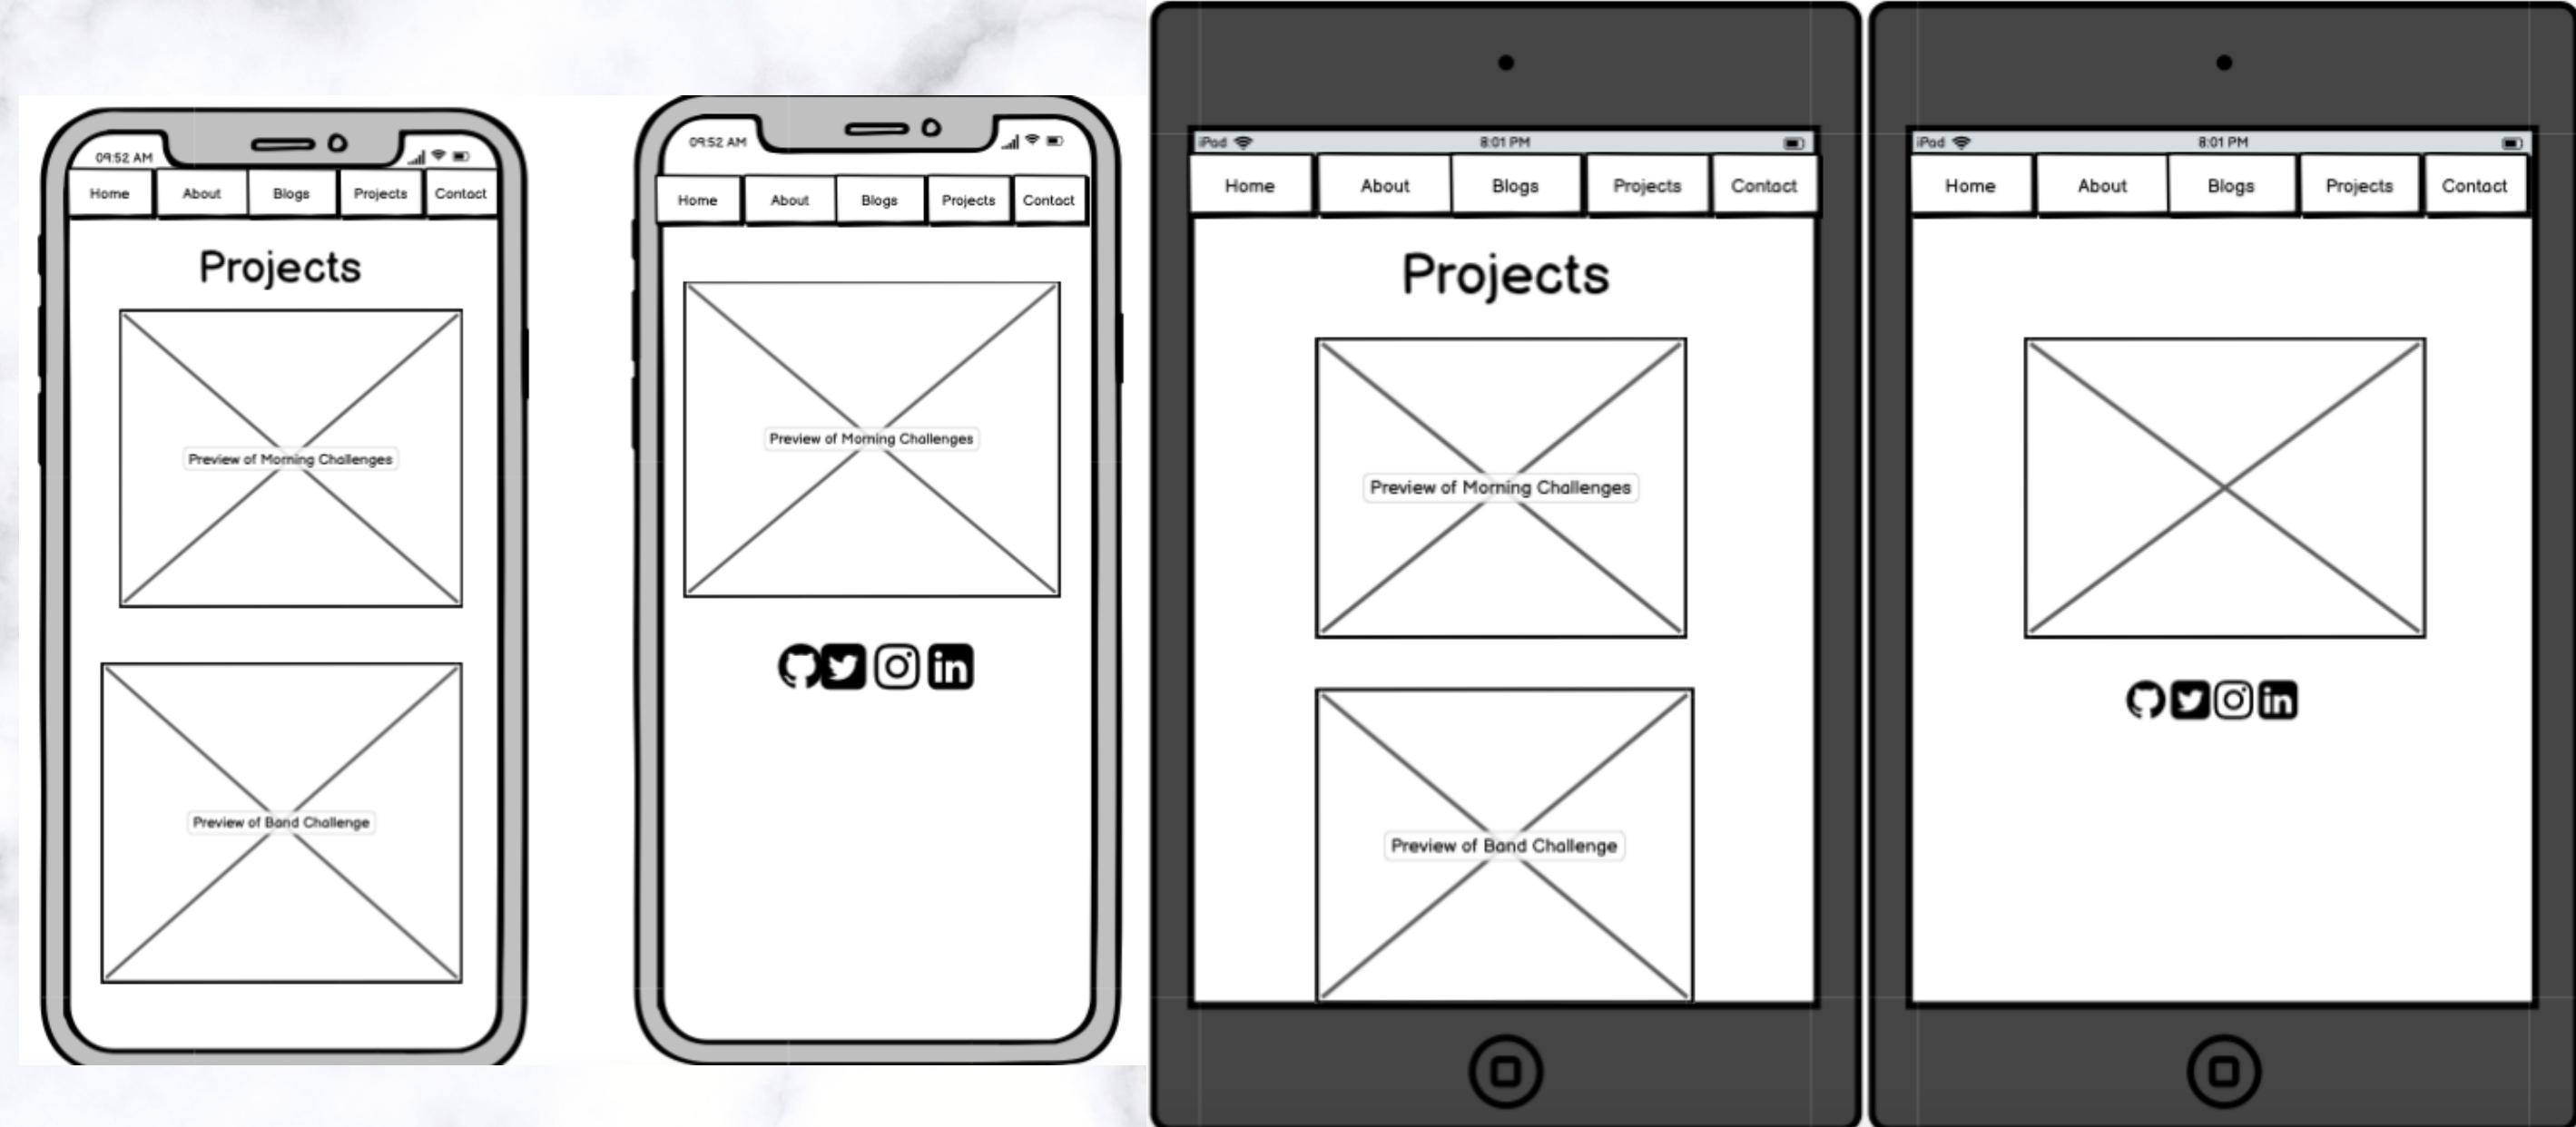

The Plan: Wireframes

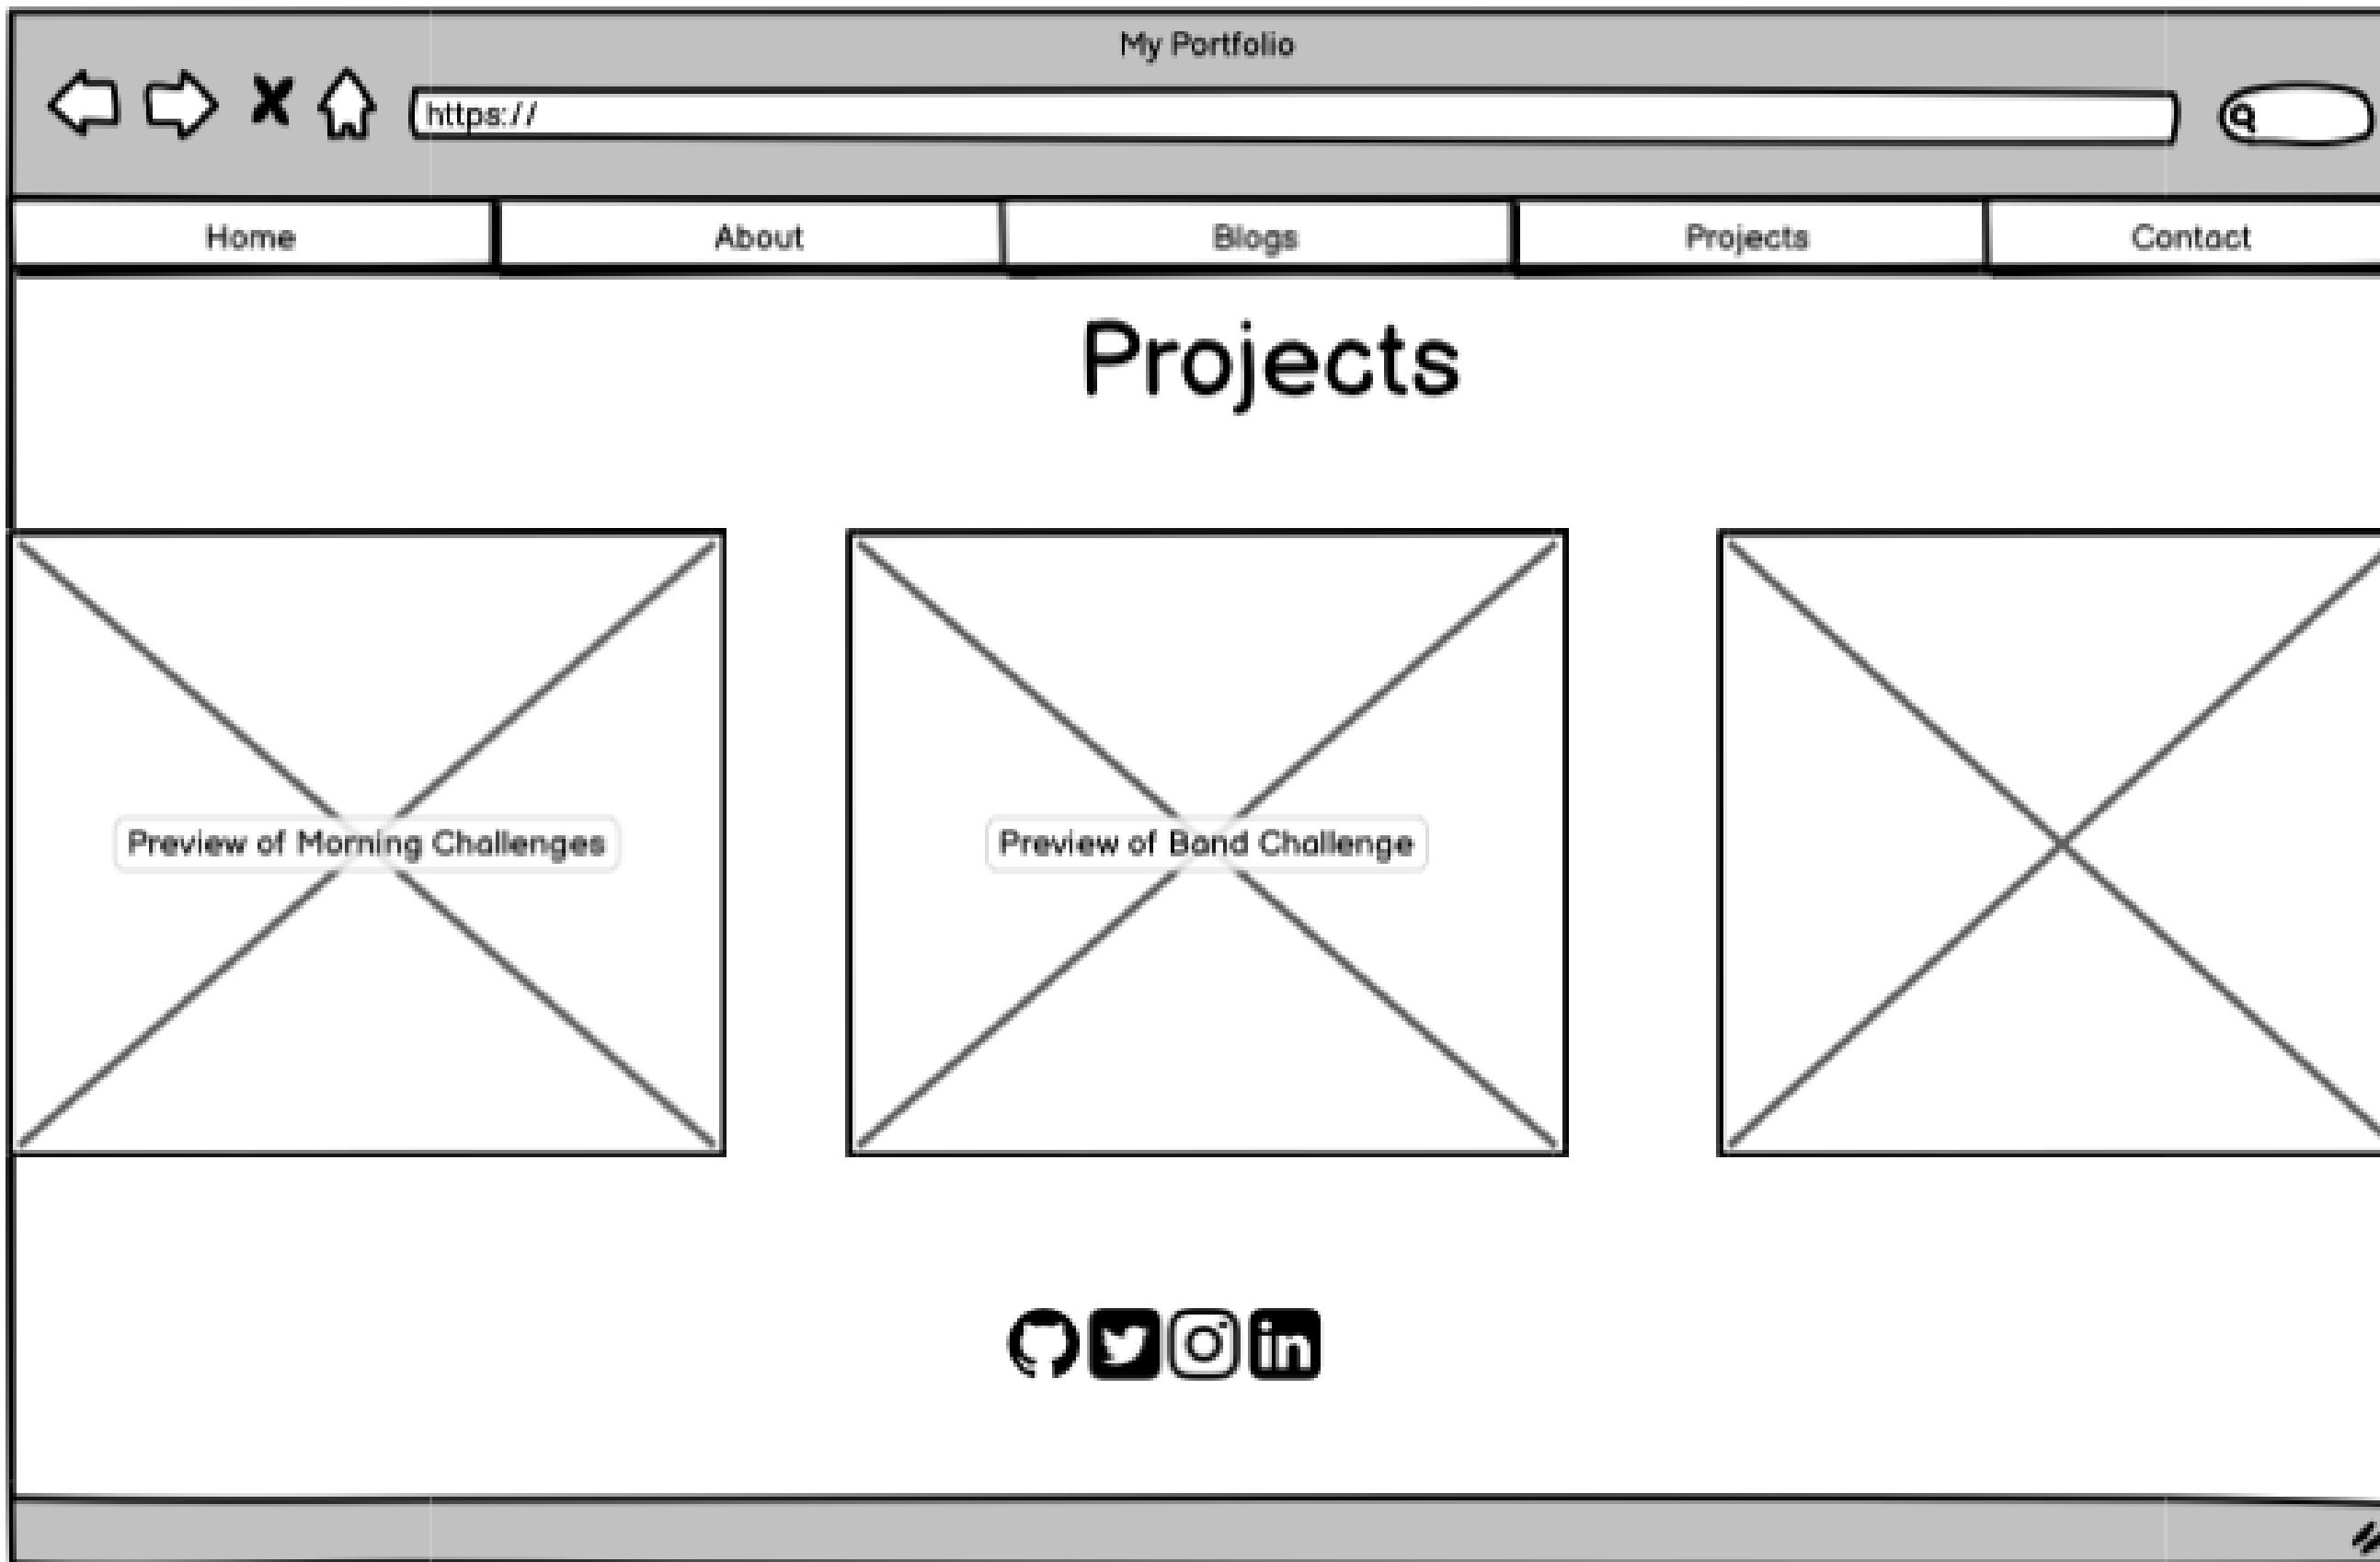

The Plan: Wireframes

Components I used:

- Navigation Bar
- Title for the page
- 3 image examples
- social media icons
- background image

The Plan: Wireframes

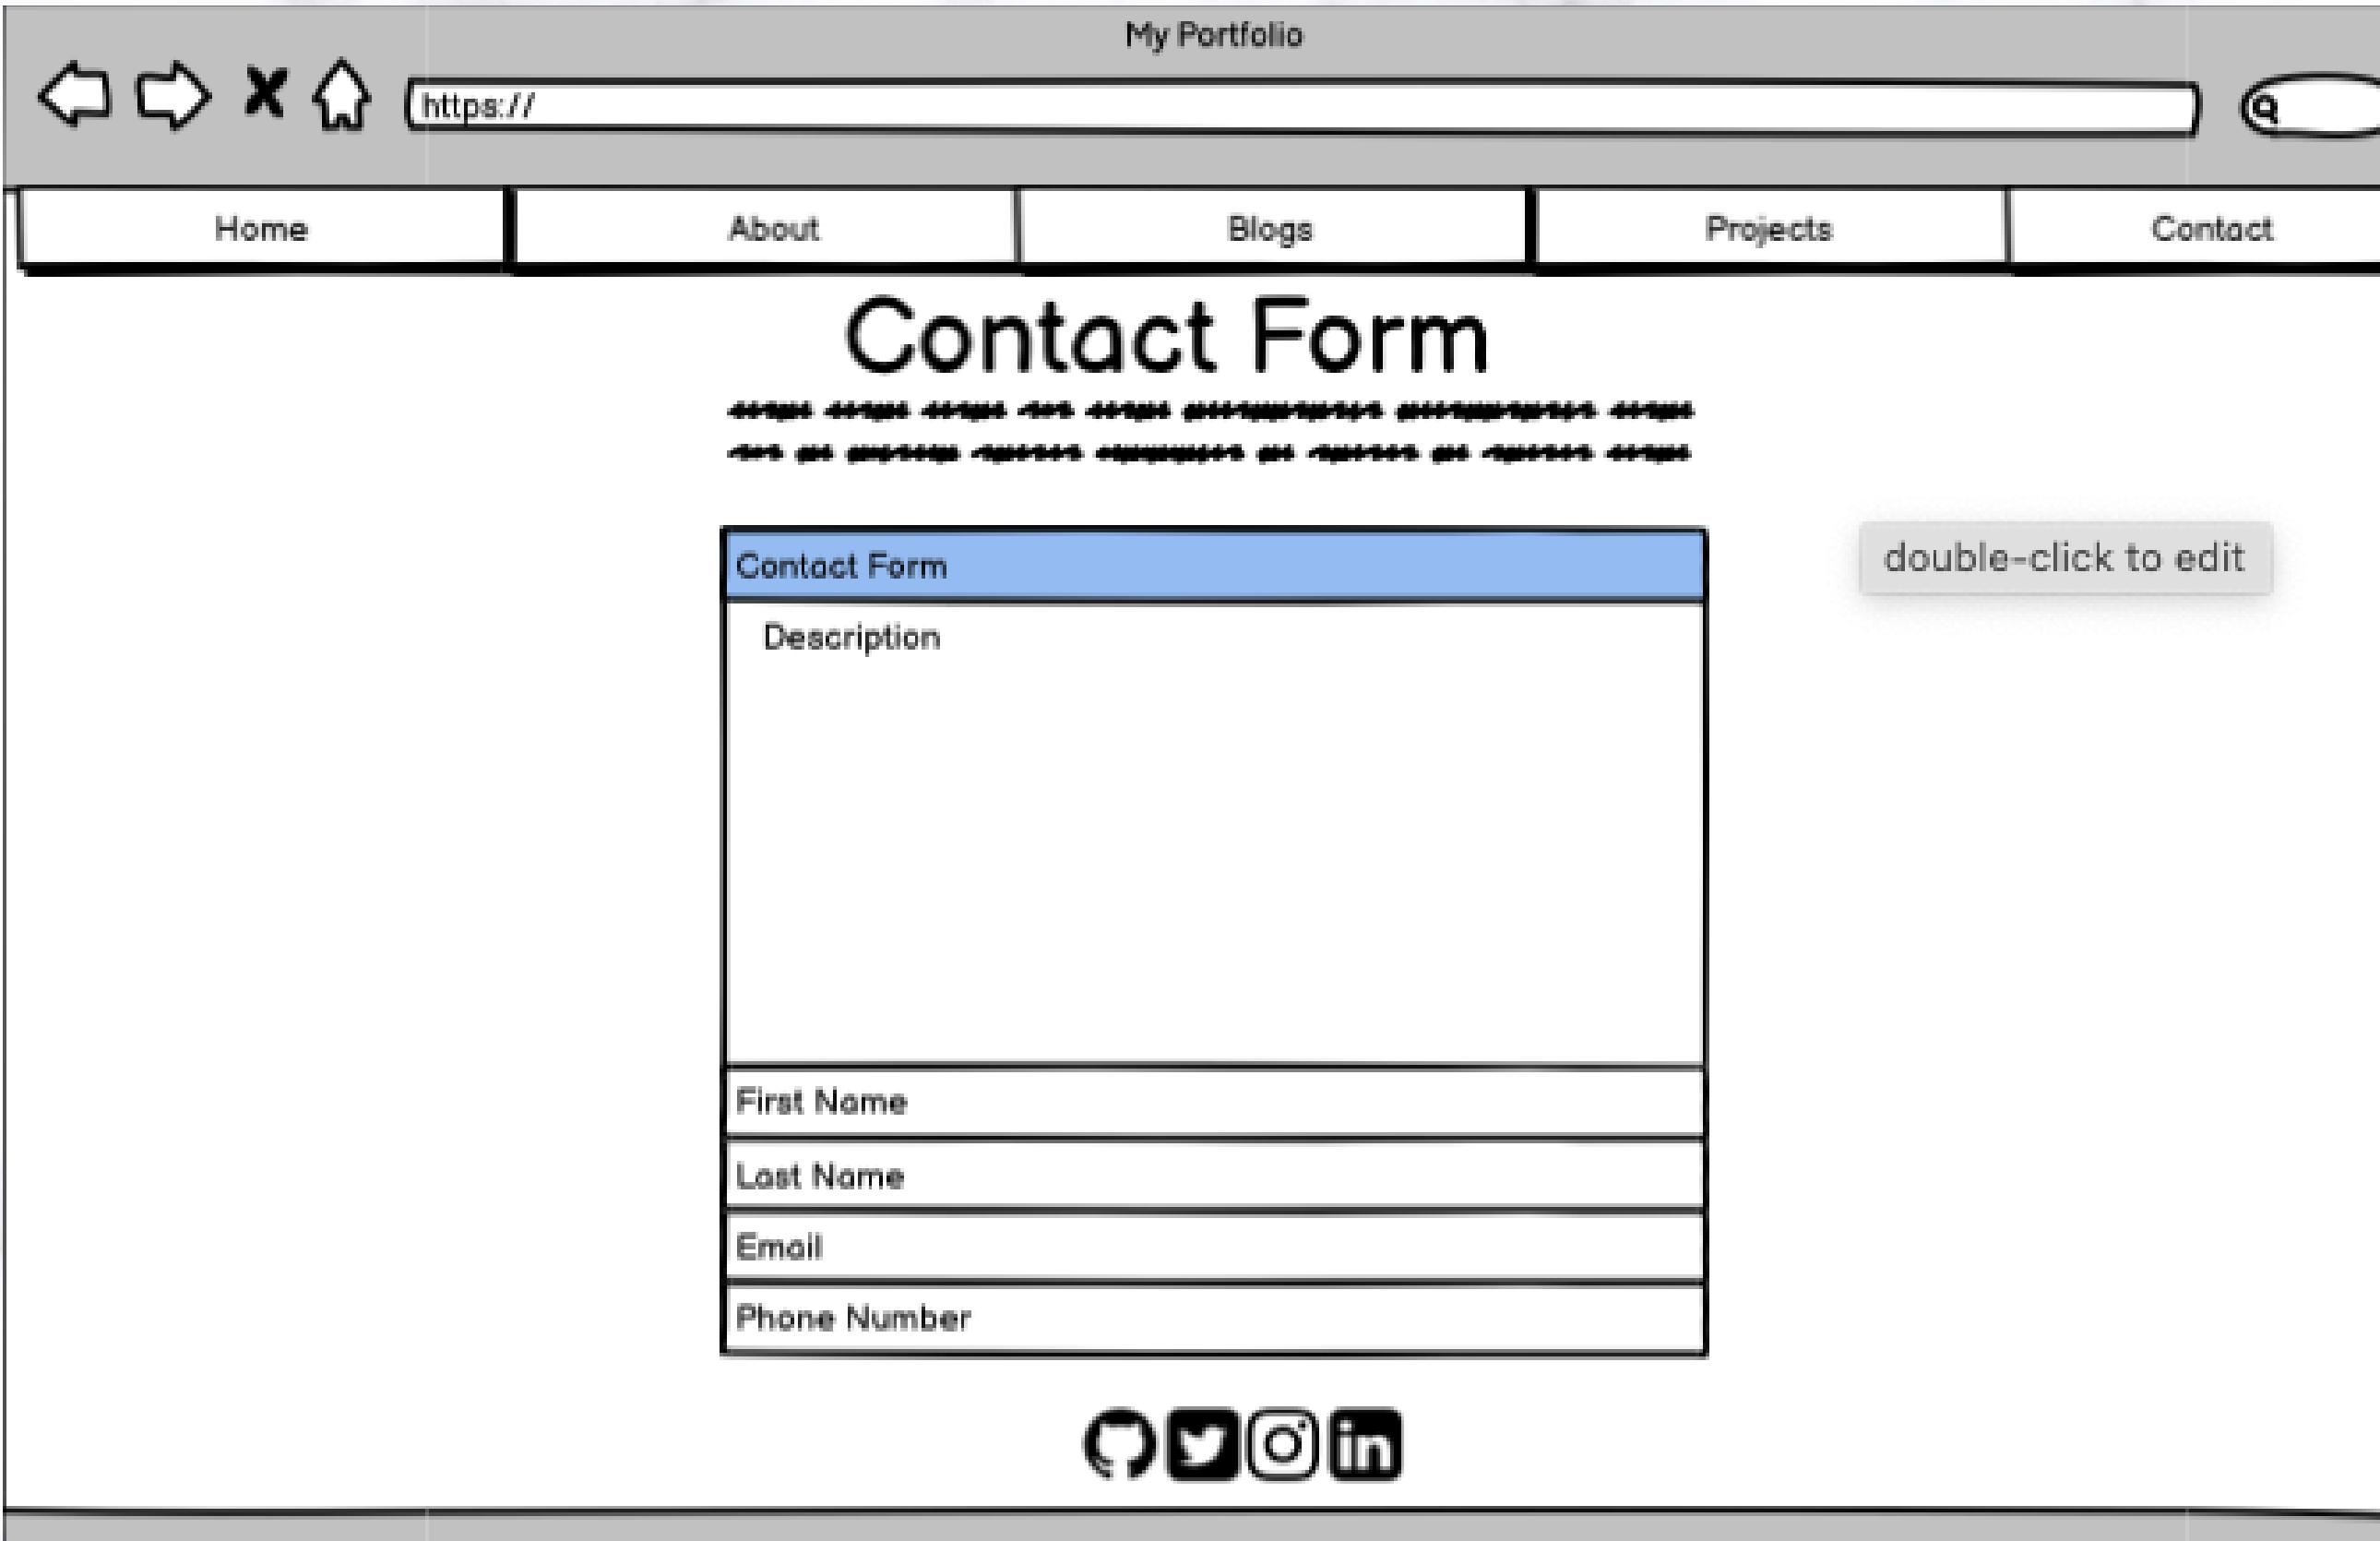

The Plan: Wireframes

Components I used:

- Navigation Bar
- Title for the page
- Text
- Contact Form
- social icons

The Plan: Wireframes

DESIGN AND STYLE THEME!

for the creative design of my portfolio I wanted to express my personality and interests through my styling of the website. I first leaned towards having a monochromatic theme with natural elements but as i progressed I added more colours and layers of other elements . I wanted to make my portfolio as creative as I could so that hopefully it would appeal to other creative like minded people .

Mood Board

- light to dark shades of green
- Cool tones
- Earth/natural elements
- grey/black/white scale

D6D6D6

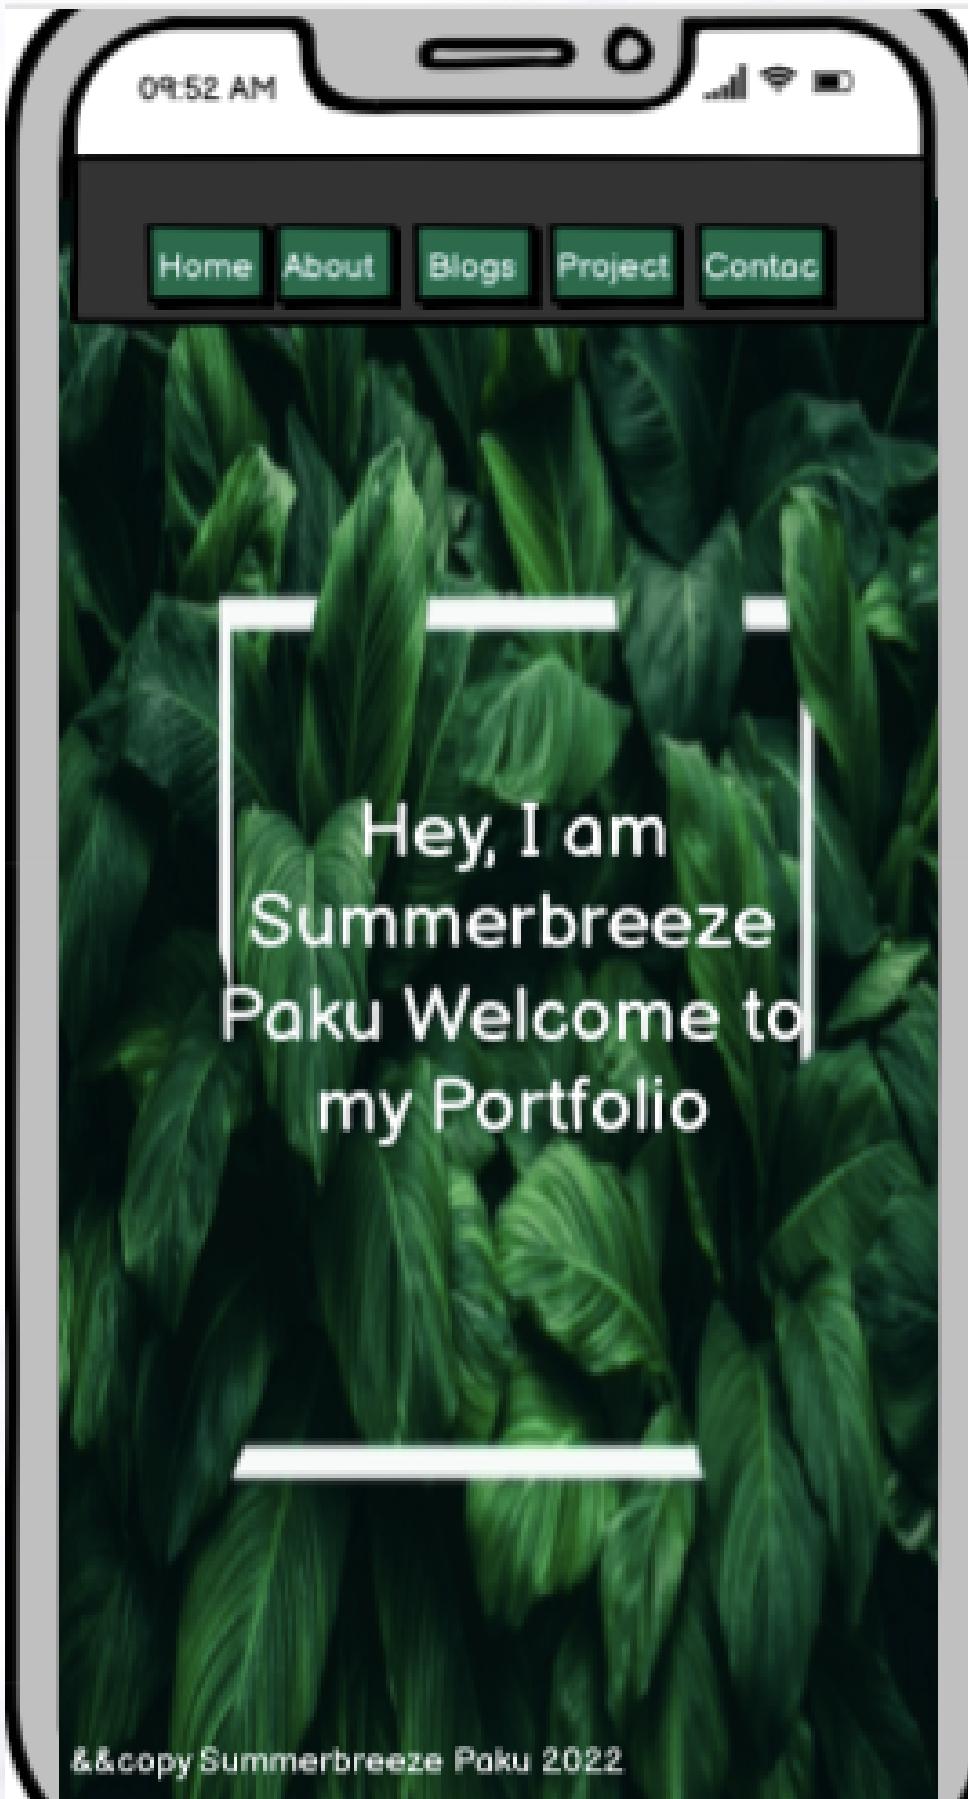

96B09D

07381C

Font-style: Noto
Serif Display

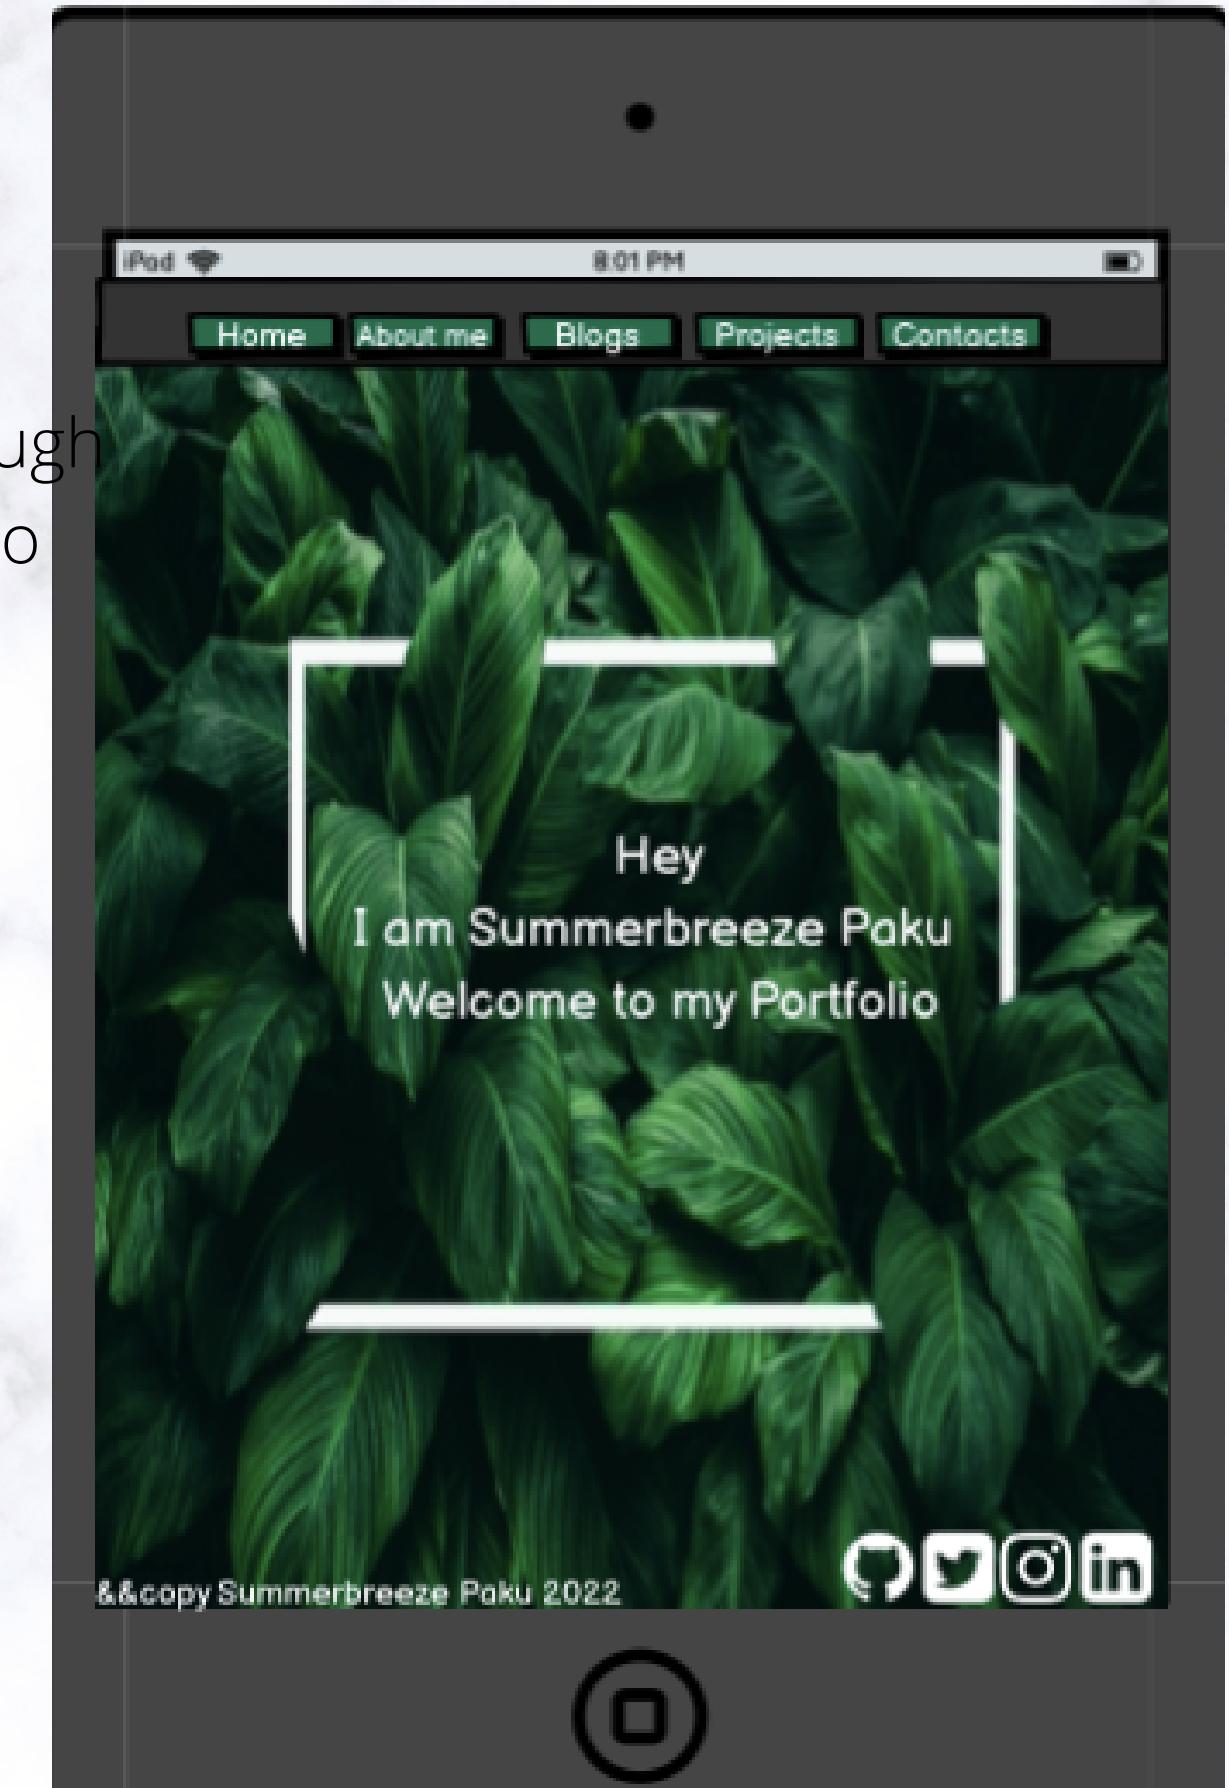

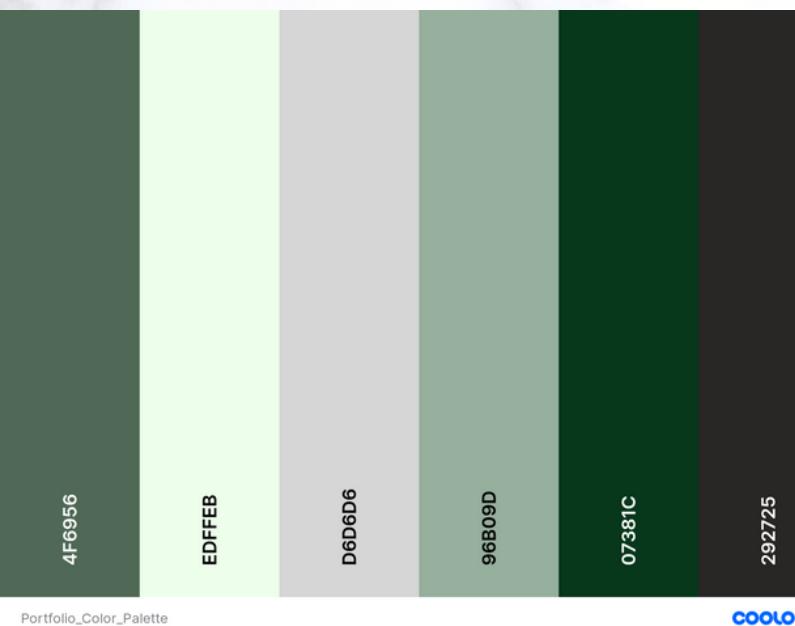

font style: Gloria
Hallelujah

The Design: Wireframes

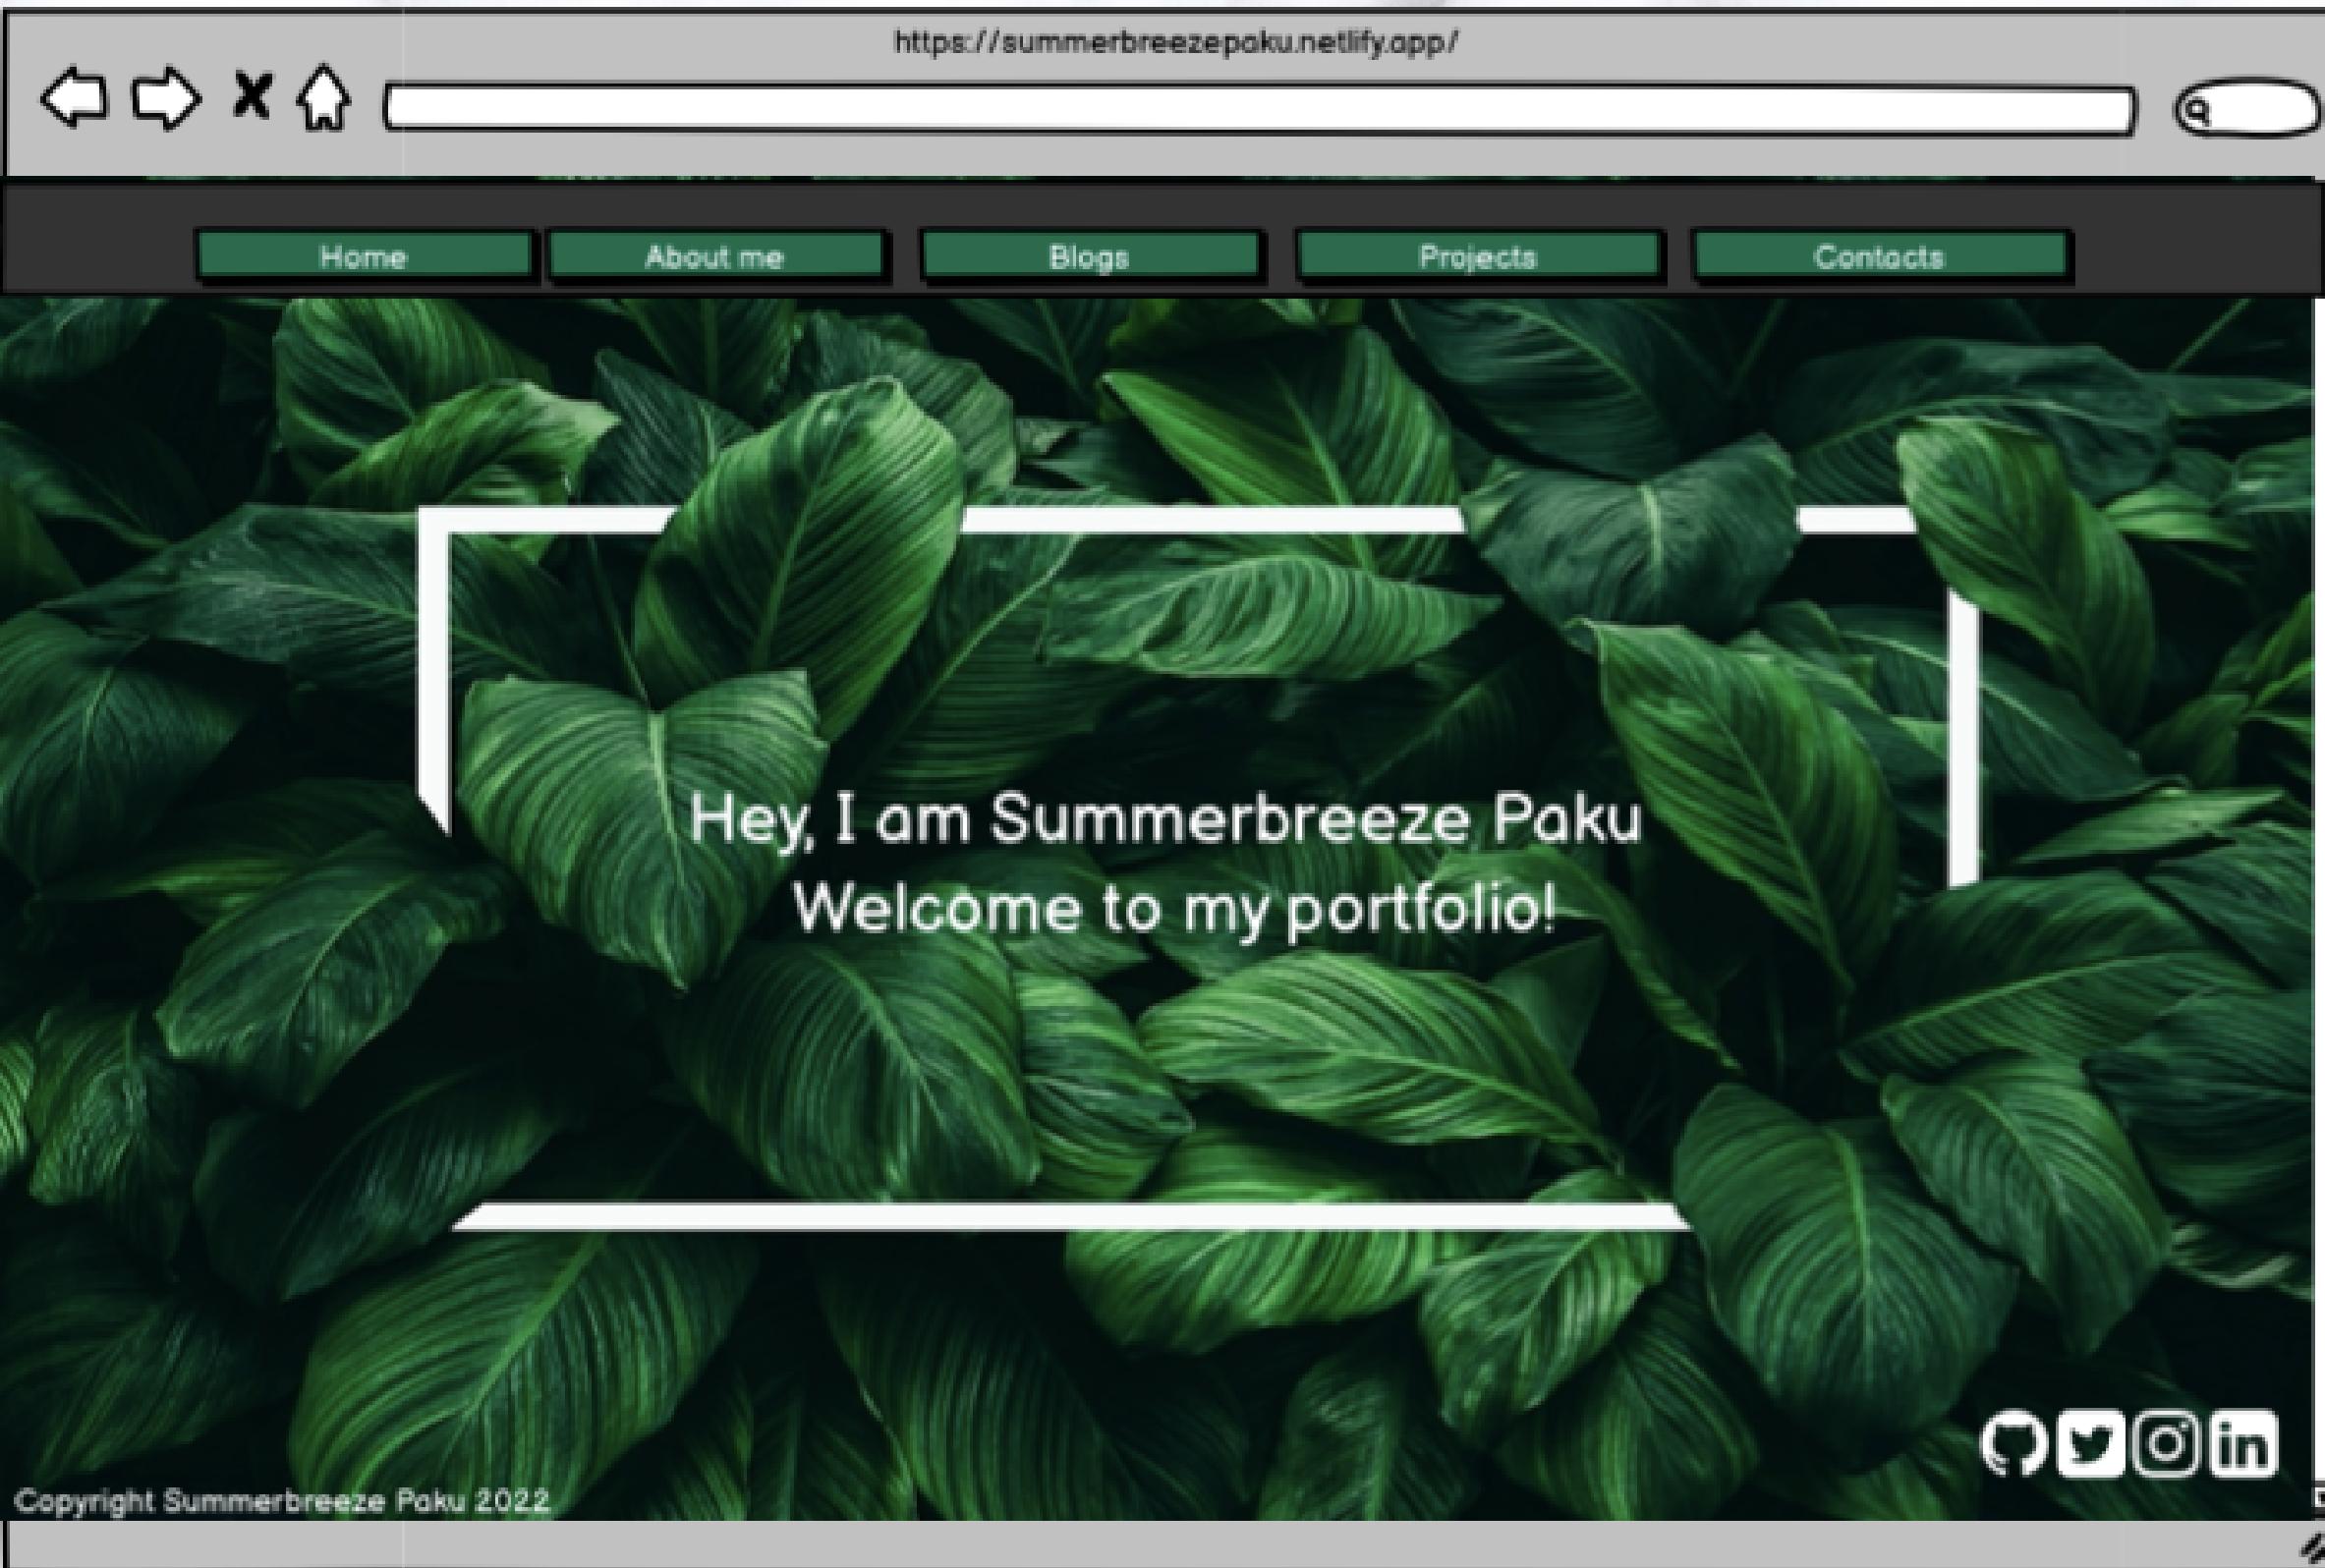

Home page background: WIP

- looks better/responsive on the desktop
- natural elements
- the nav bar is grey and slightly see through
- colour of the listed in nav bar changes to forest green with hovering over it
- baby light green title page
- all colours in the palette were used
- monochromatic theme

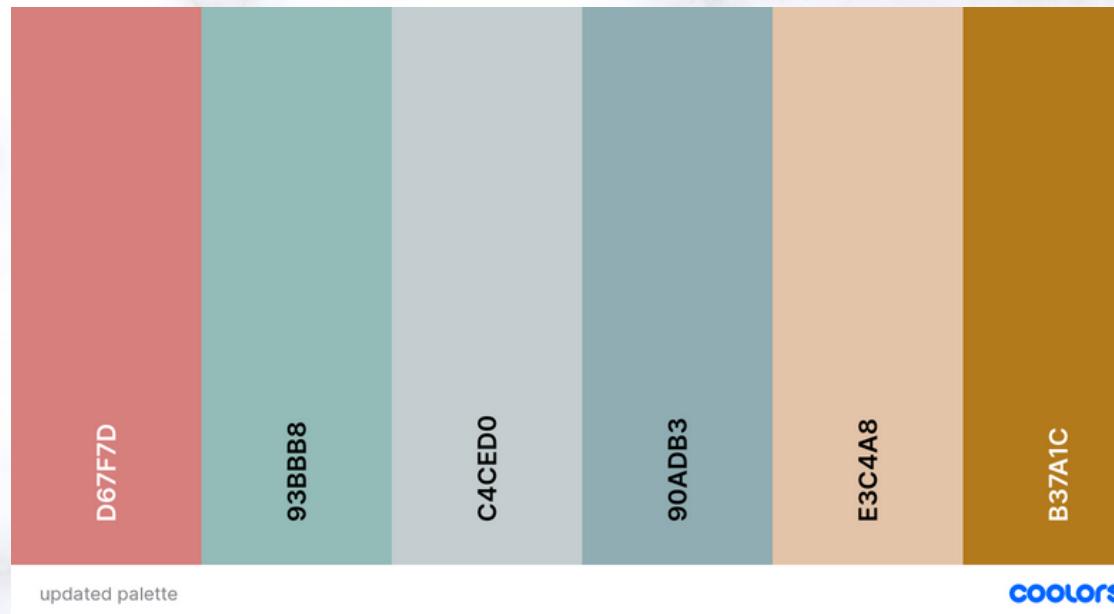

The Design: Wireframes

looks better in desktop view

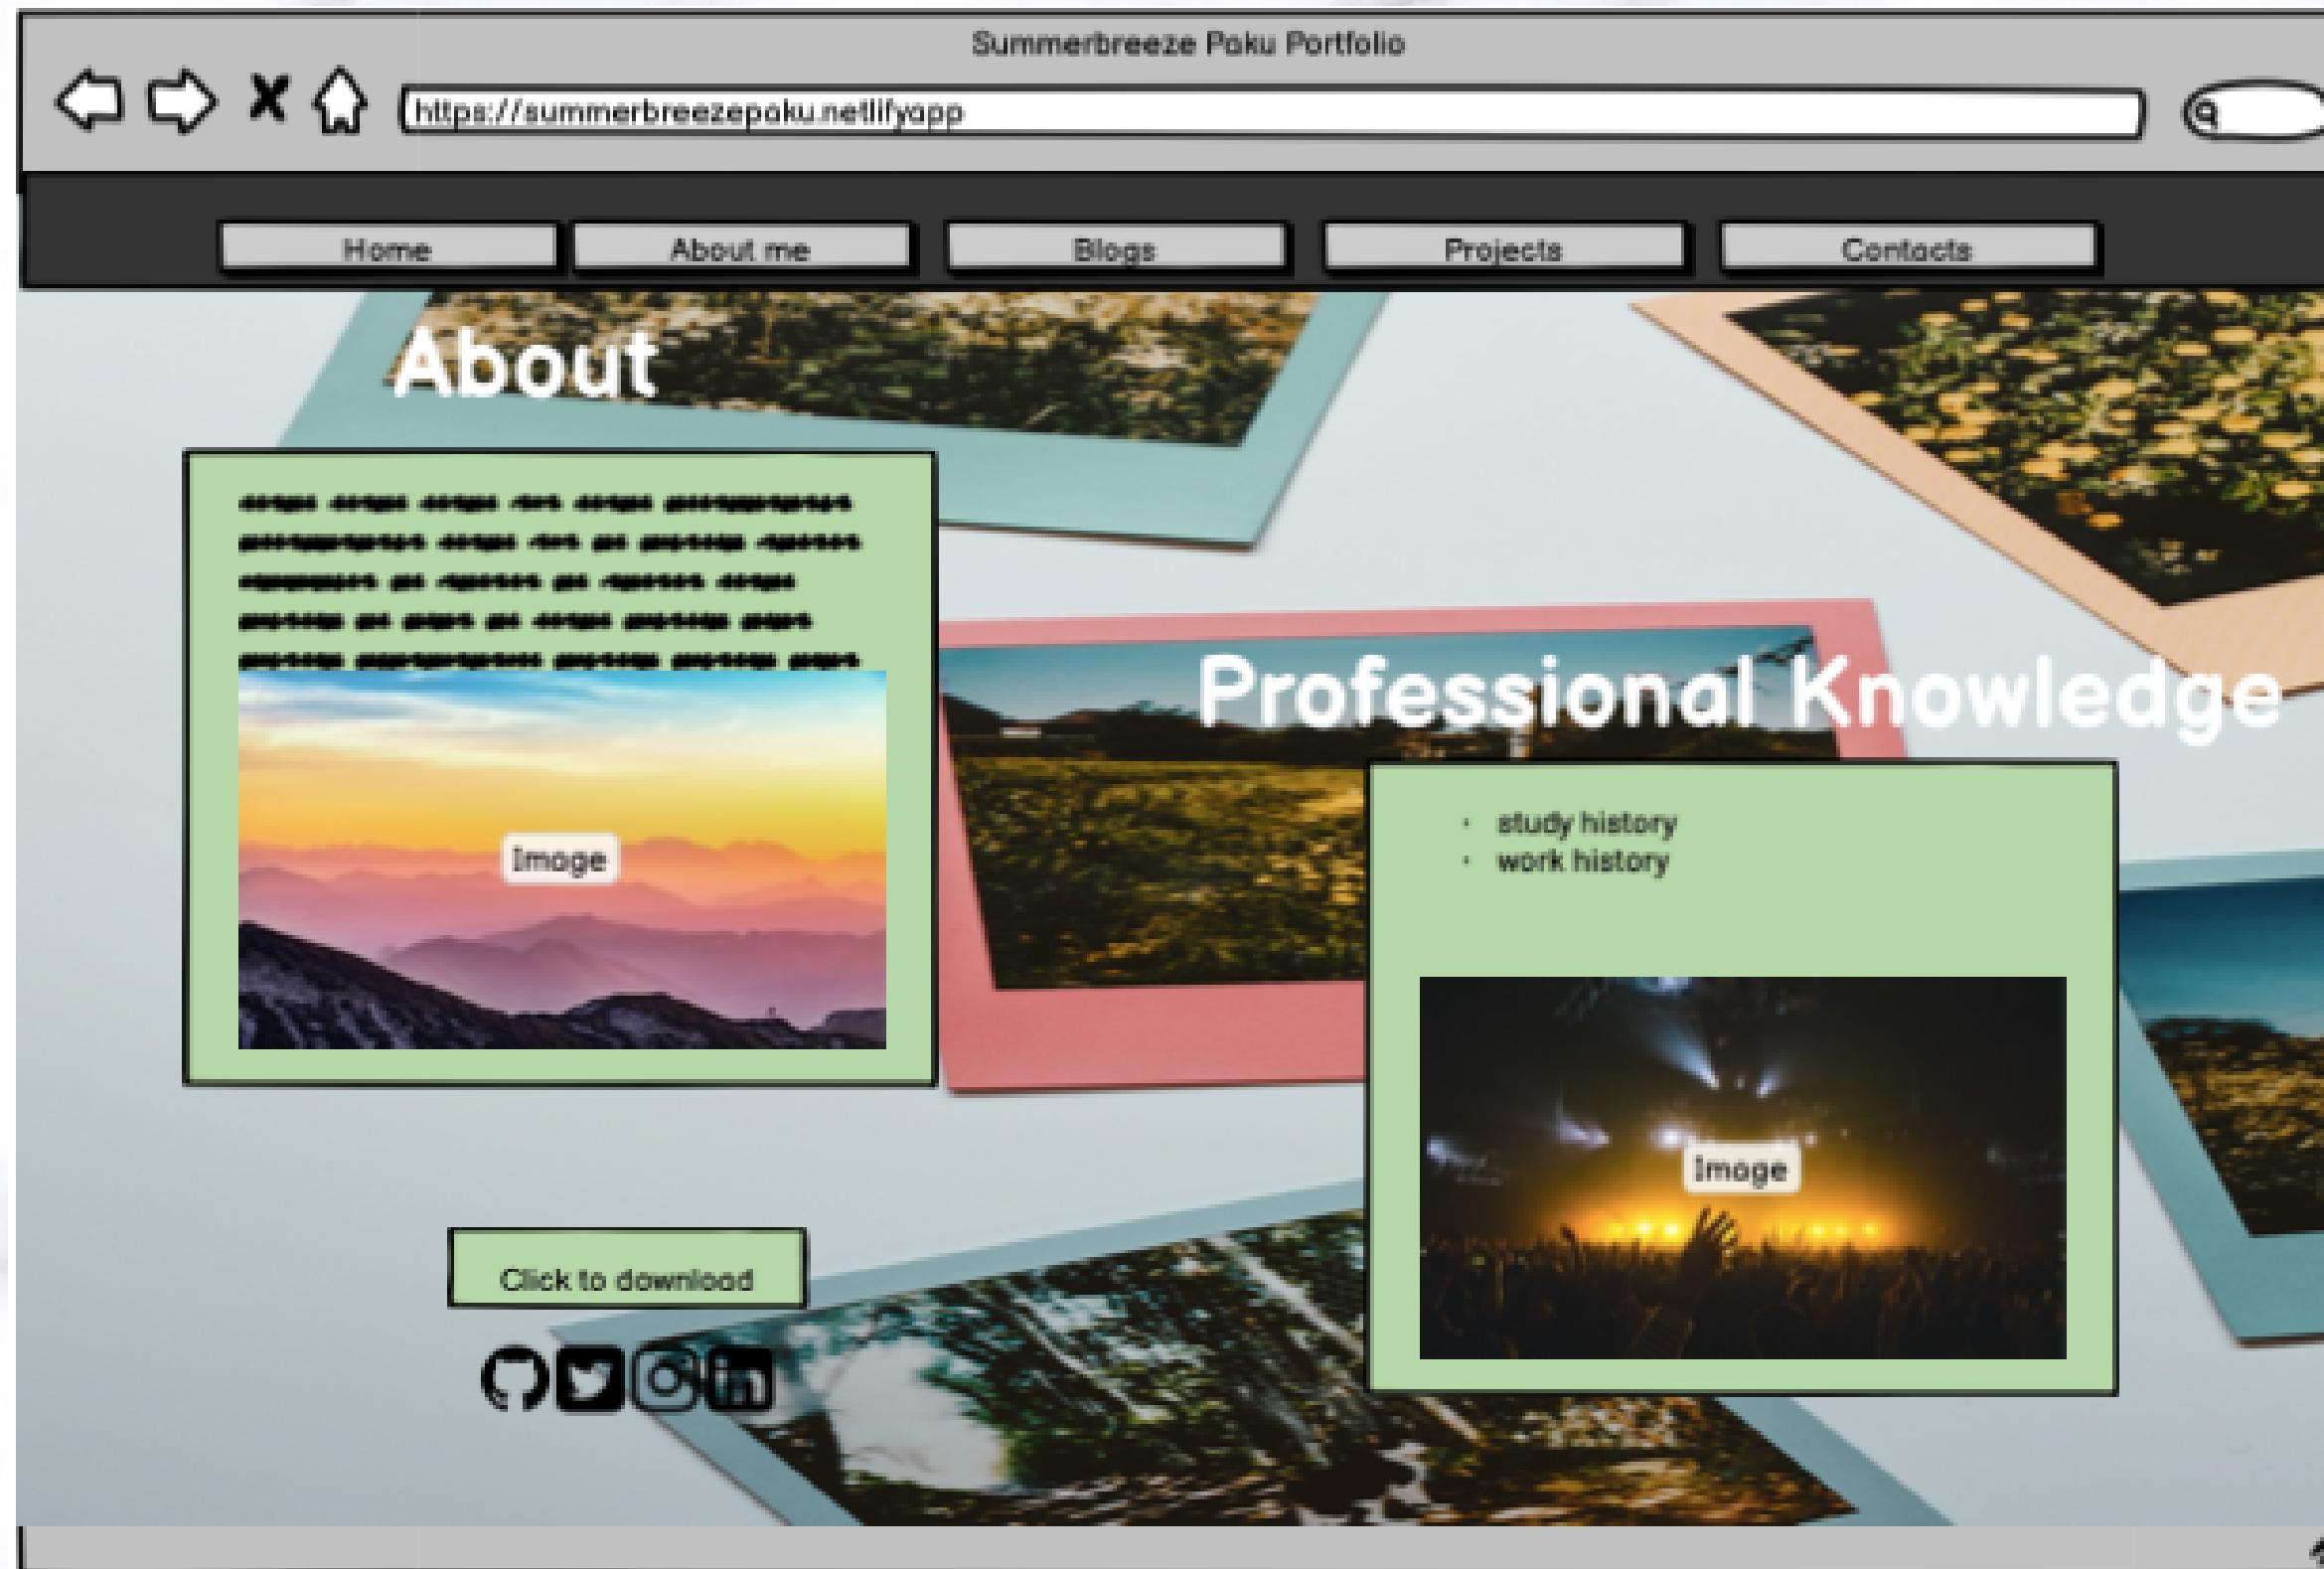

The Design: Wireframes

- I accidentally made this design
 - polaroid theme
 - added new colors, coralating with my existing palette

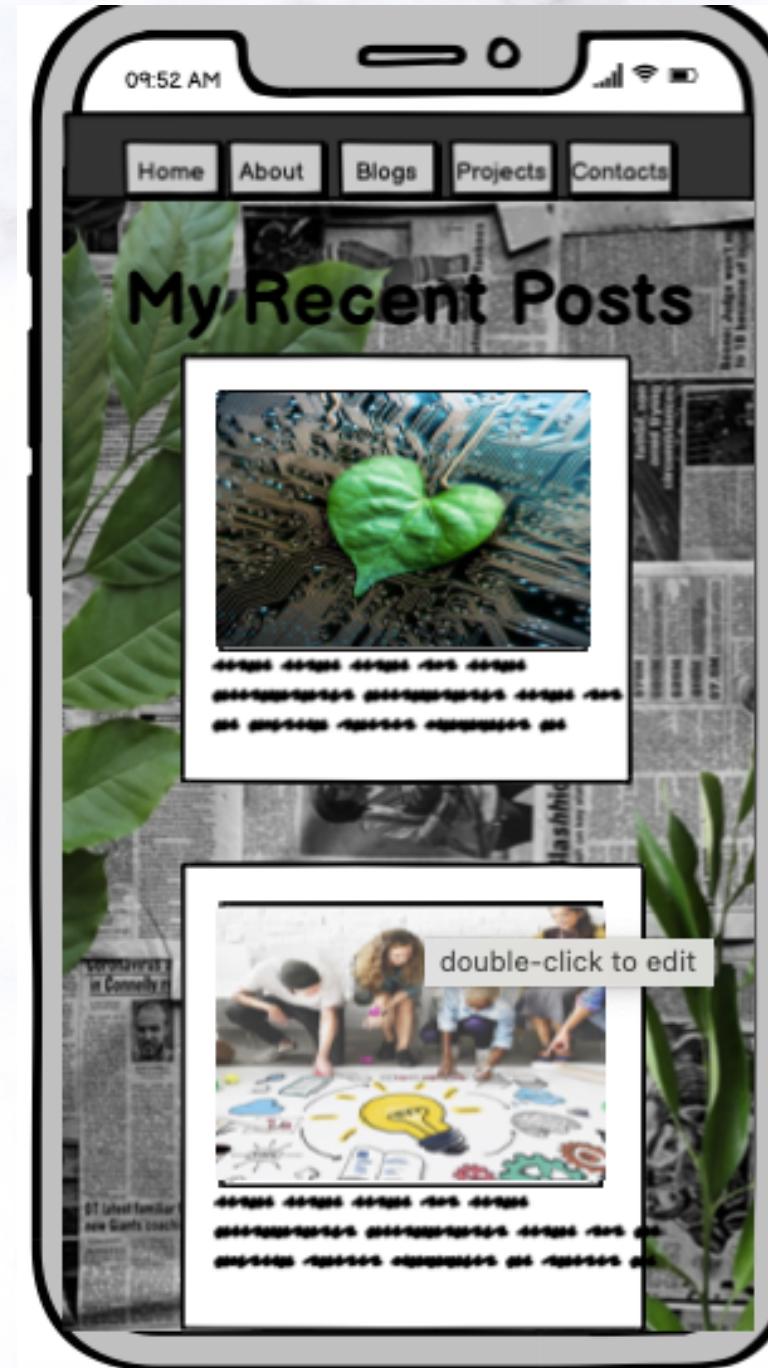

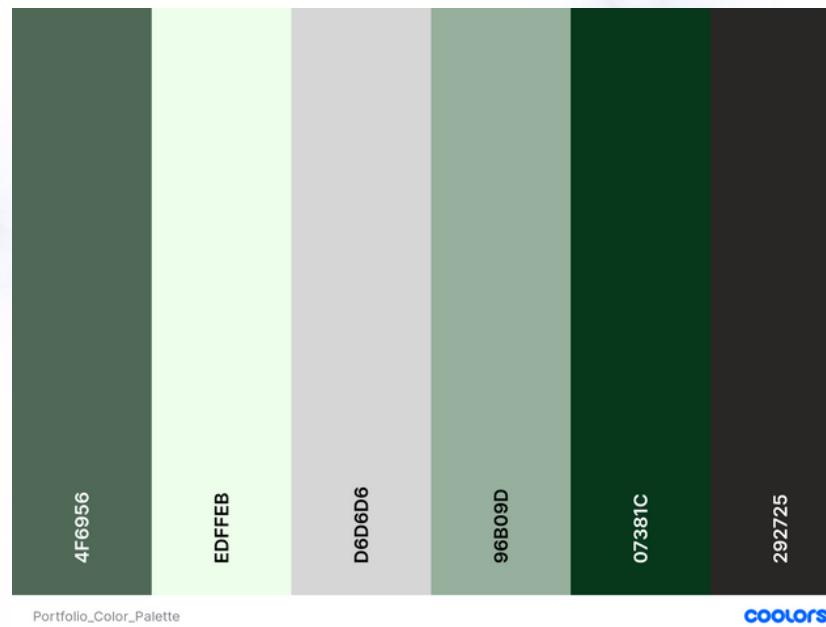

The Design: Wireframes

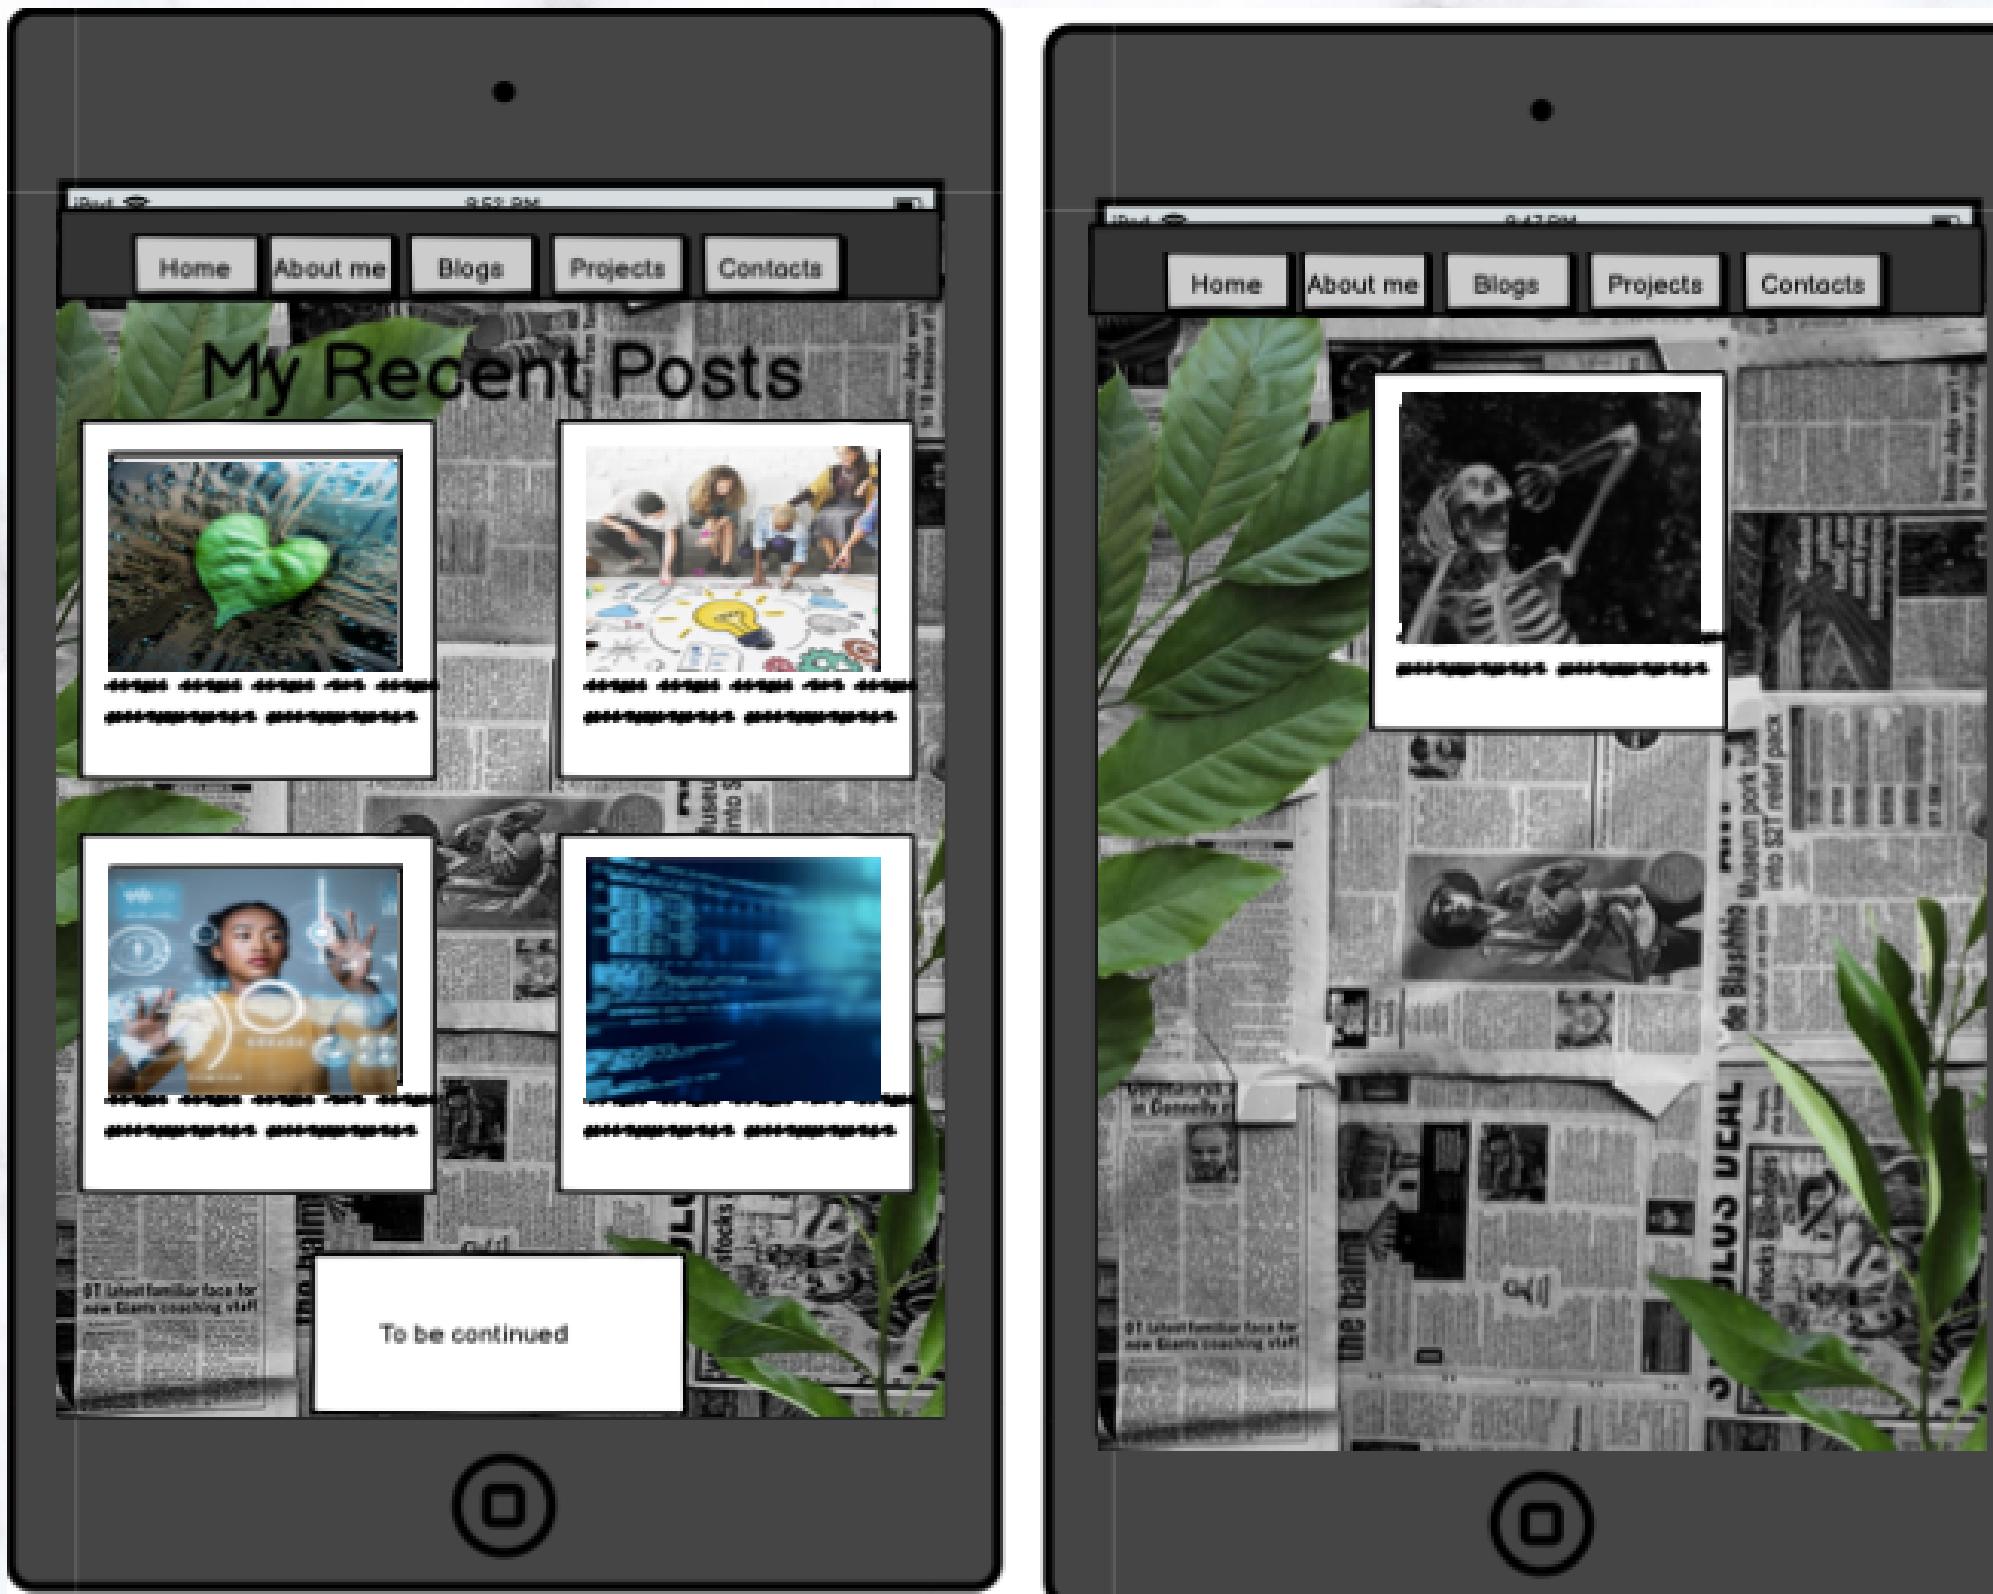

The Design: Wireframes

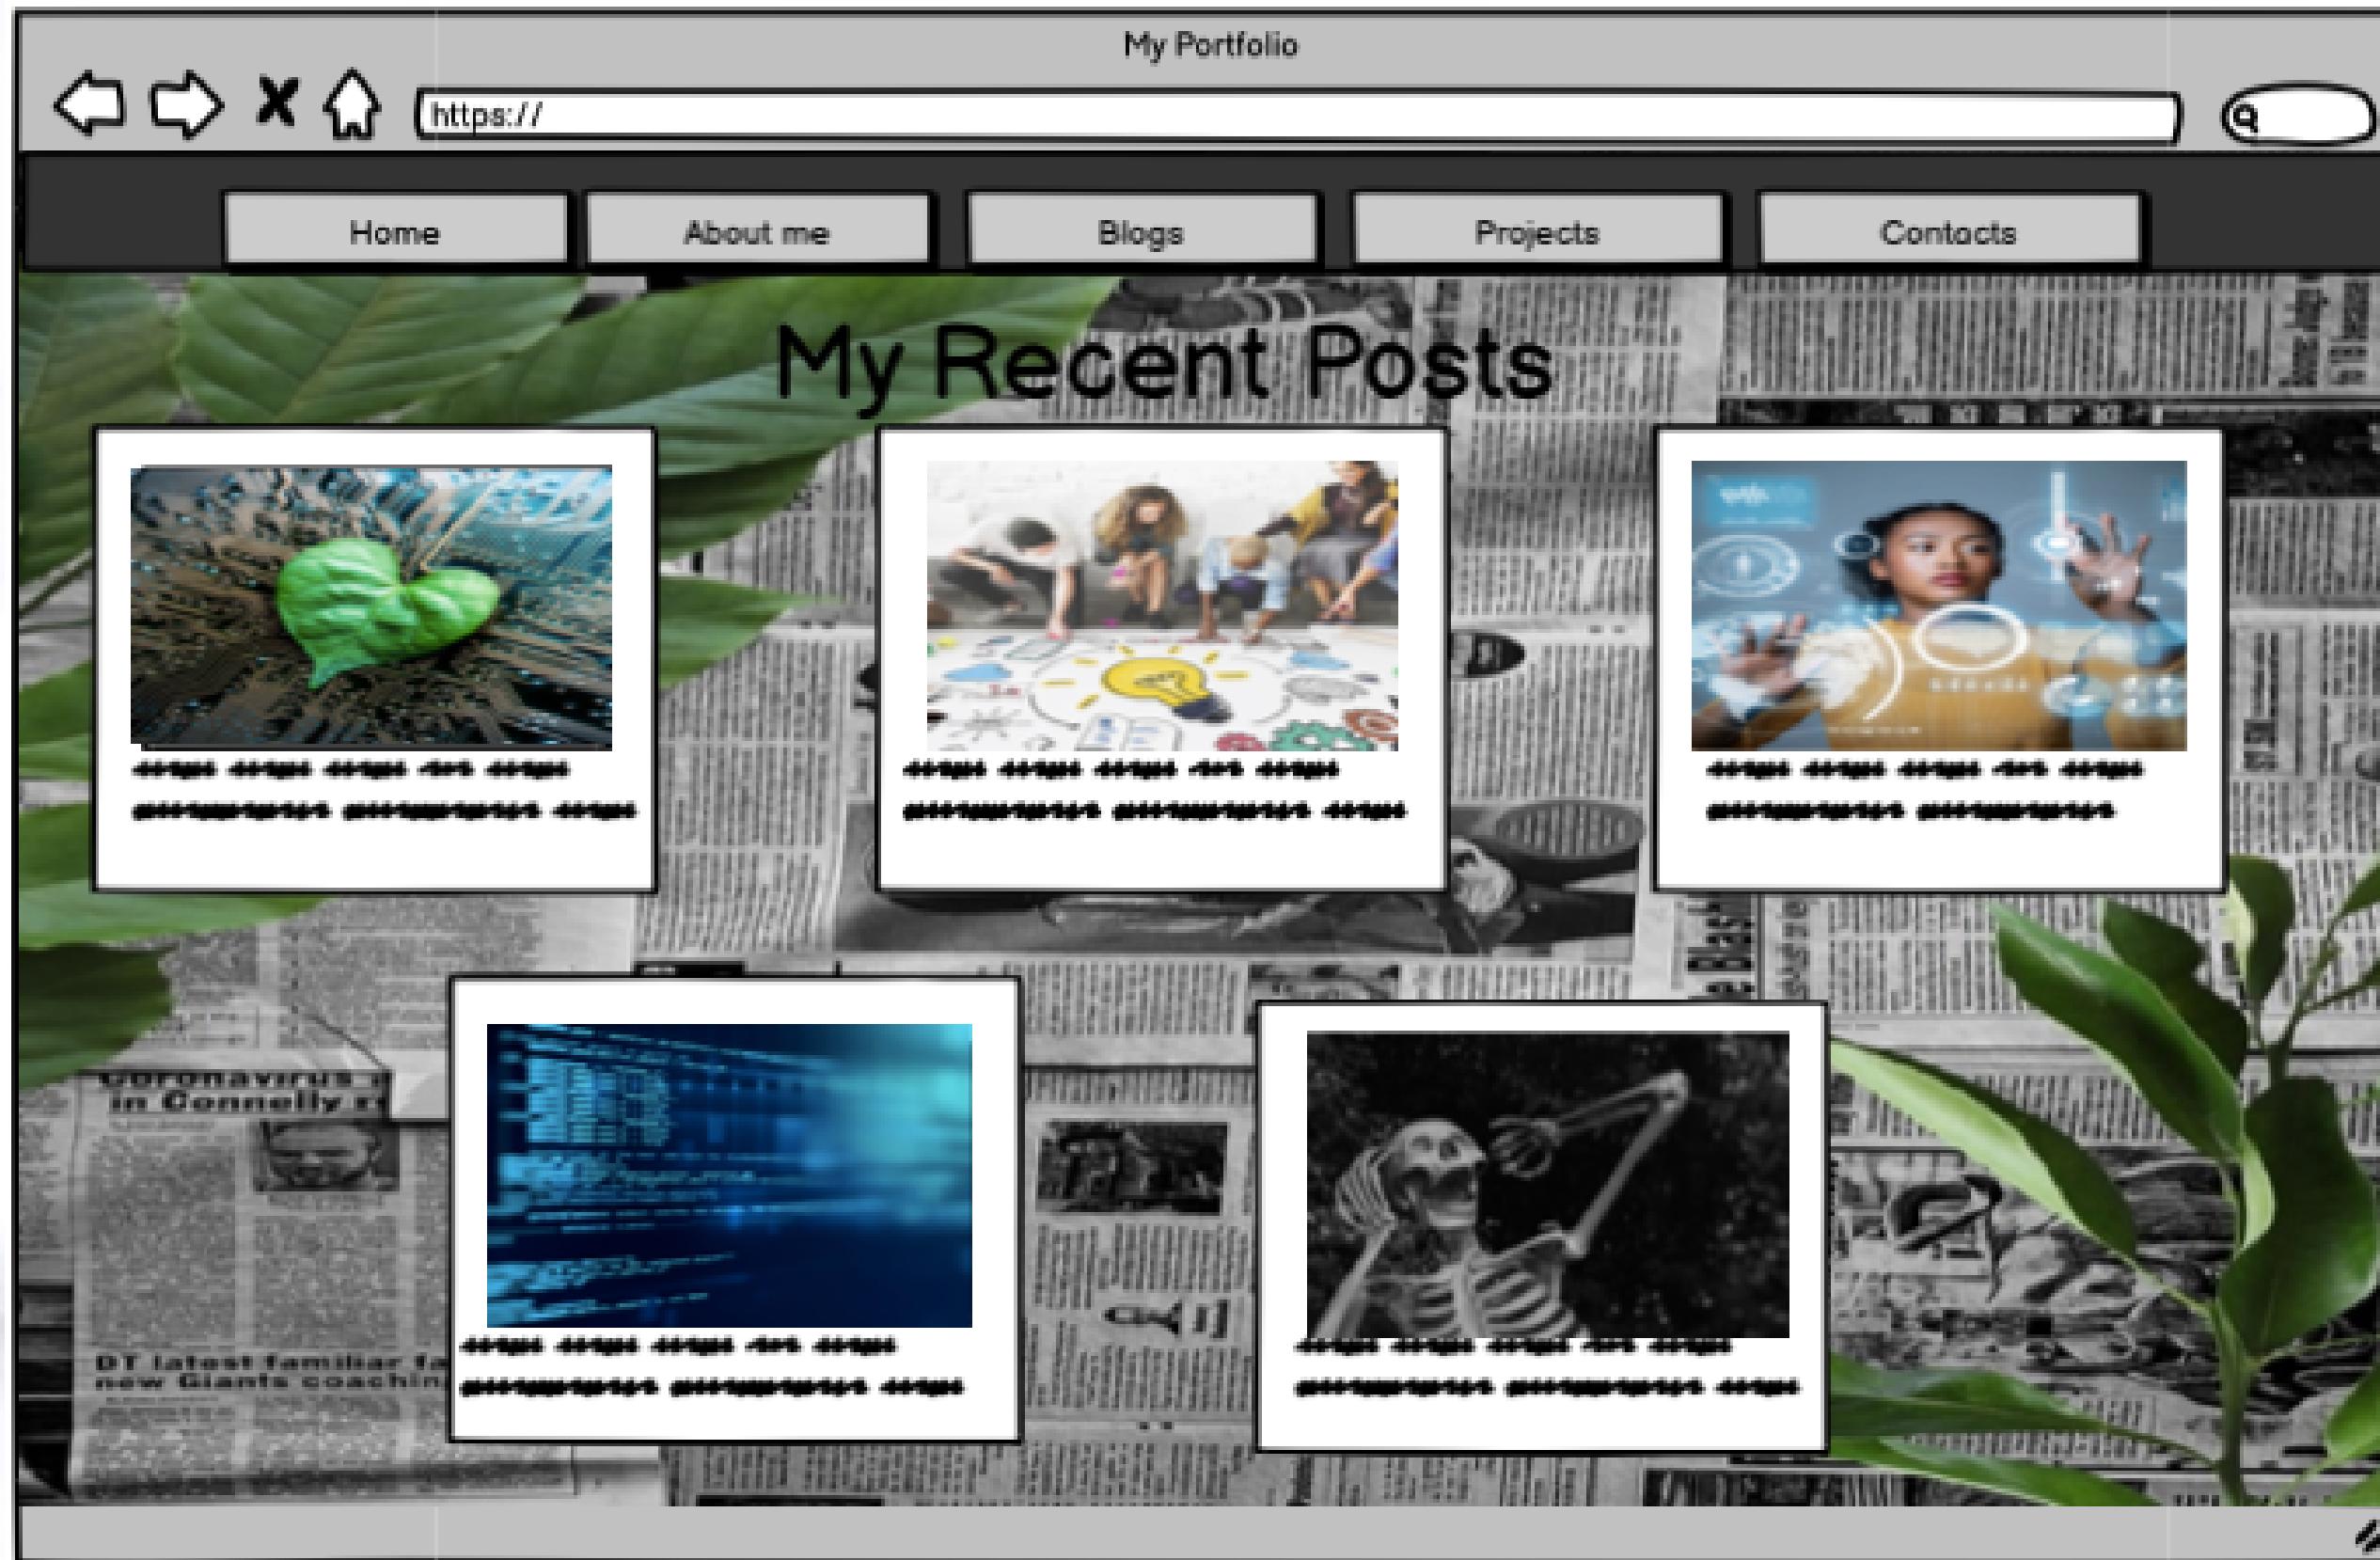

- Newspaper/article theme with natural elements
- green shades used to highlight the black and grey shades

The Design: Wireframes

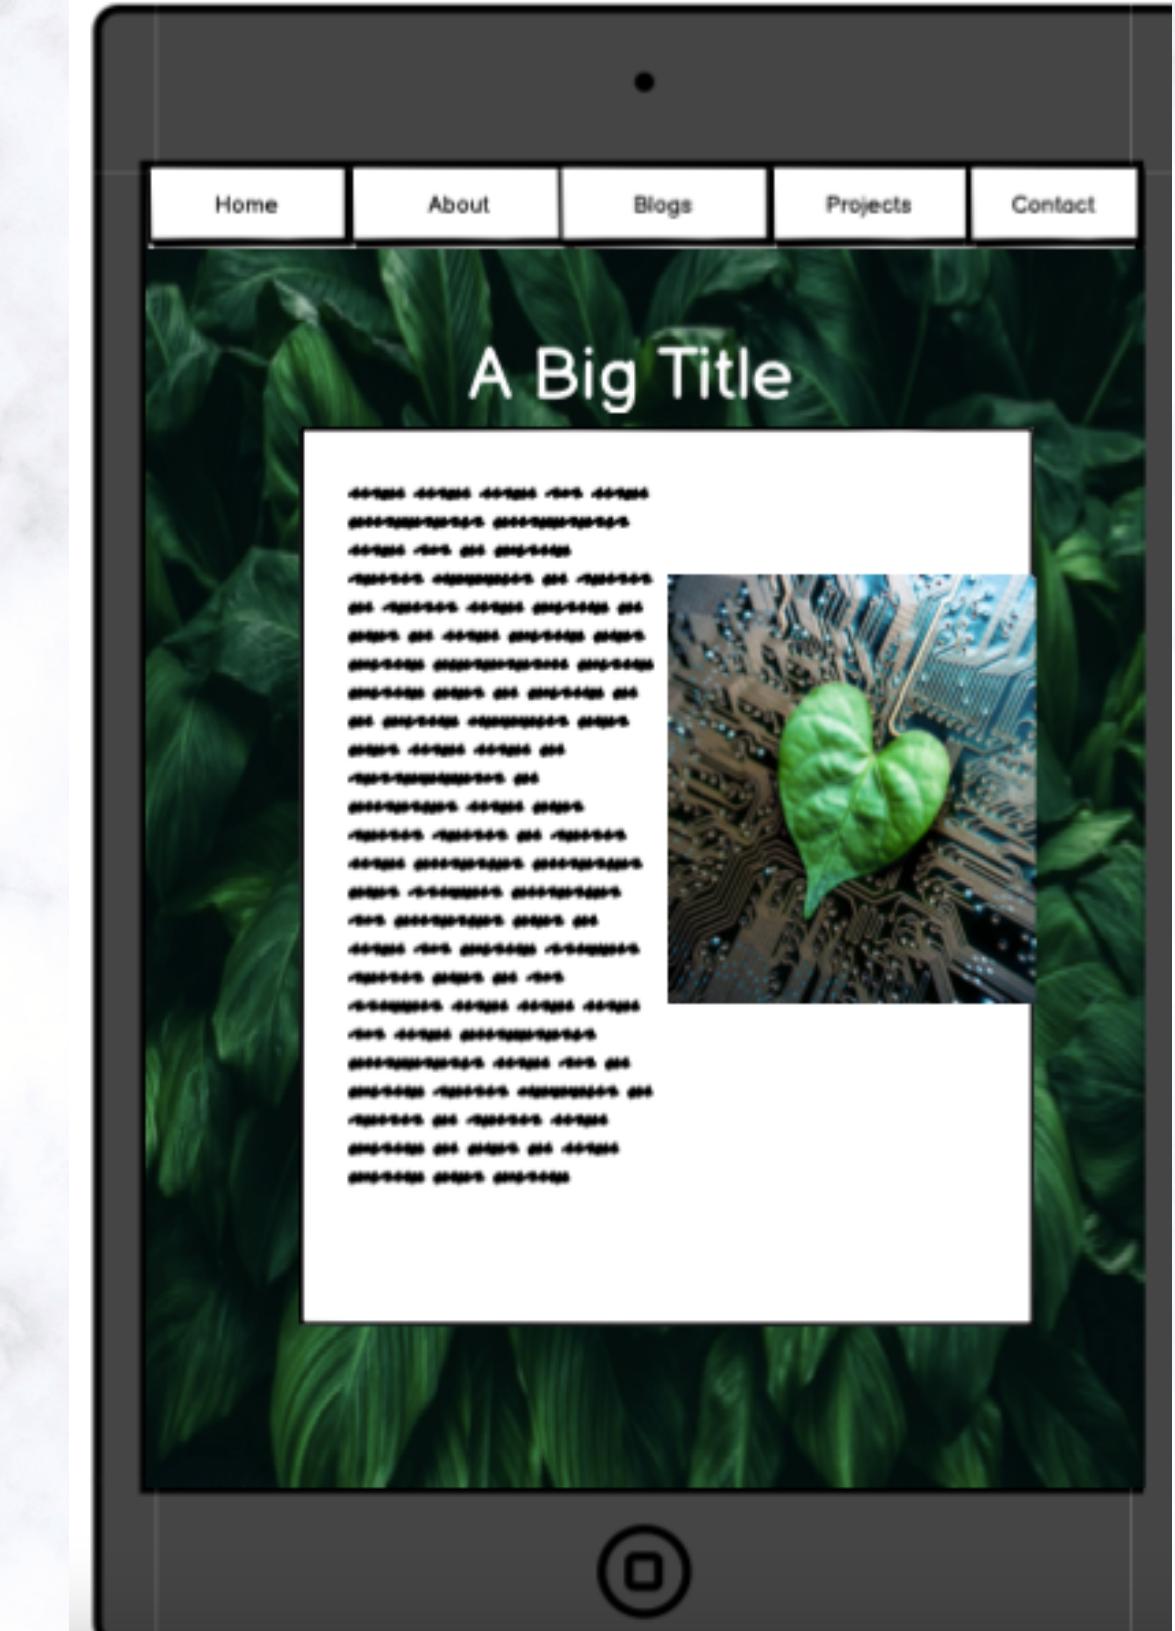

The Design: Wireframes

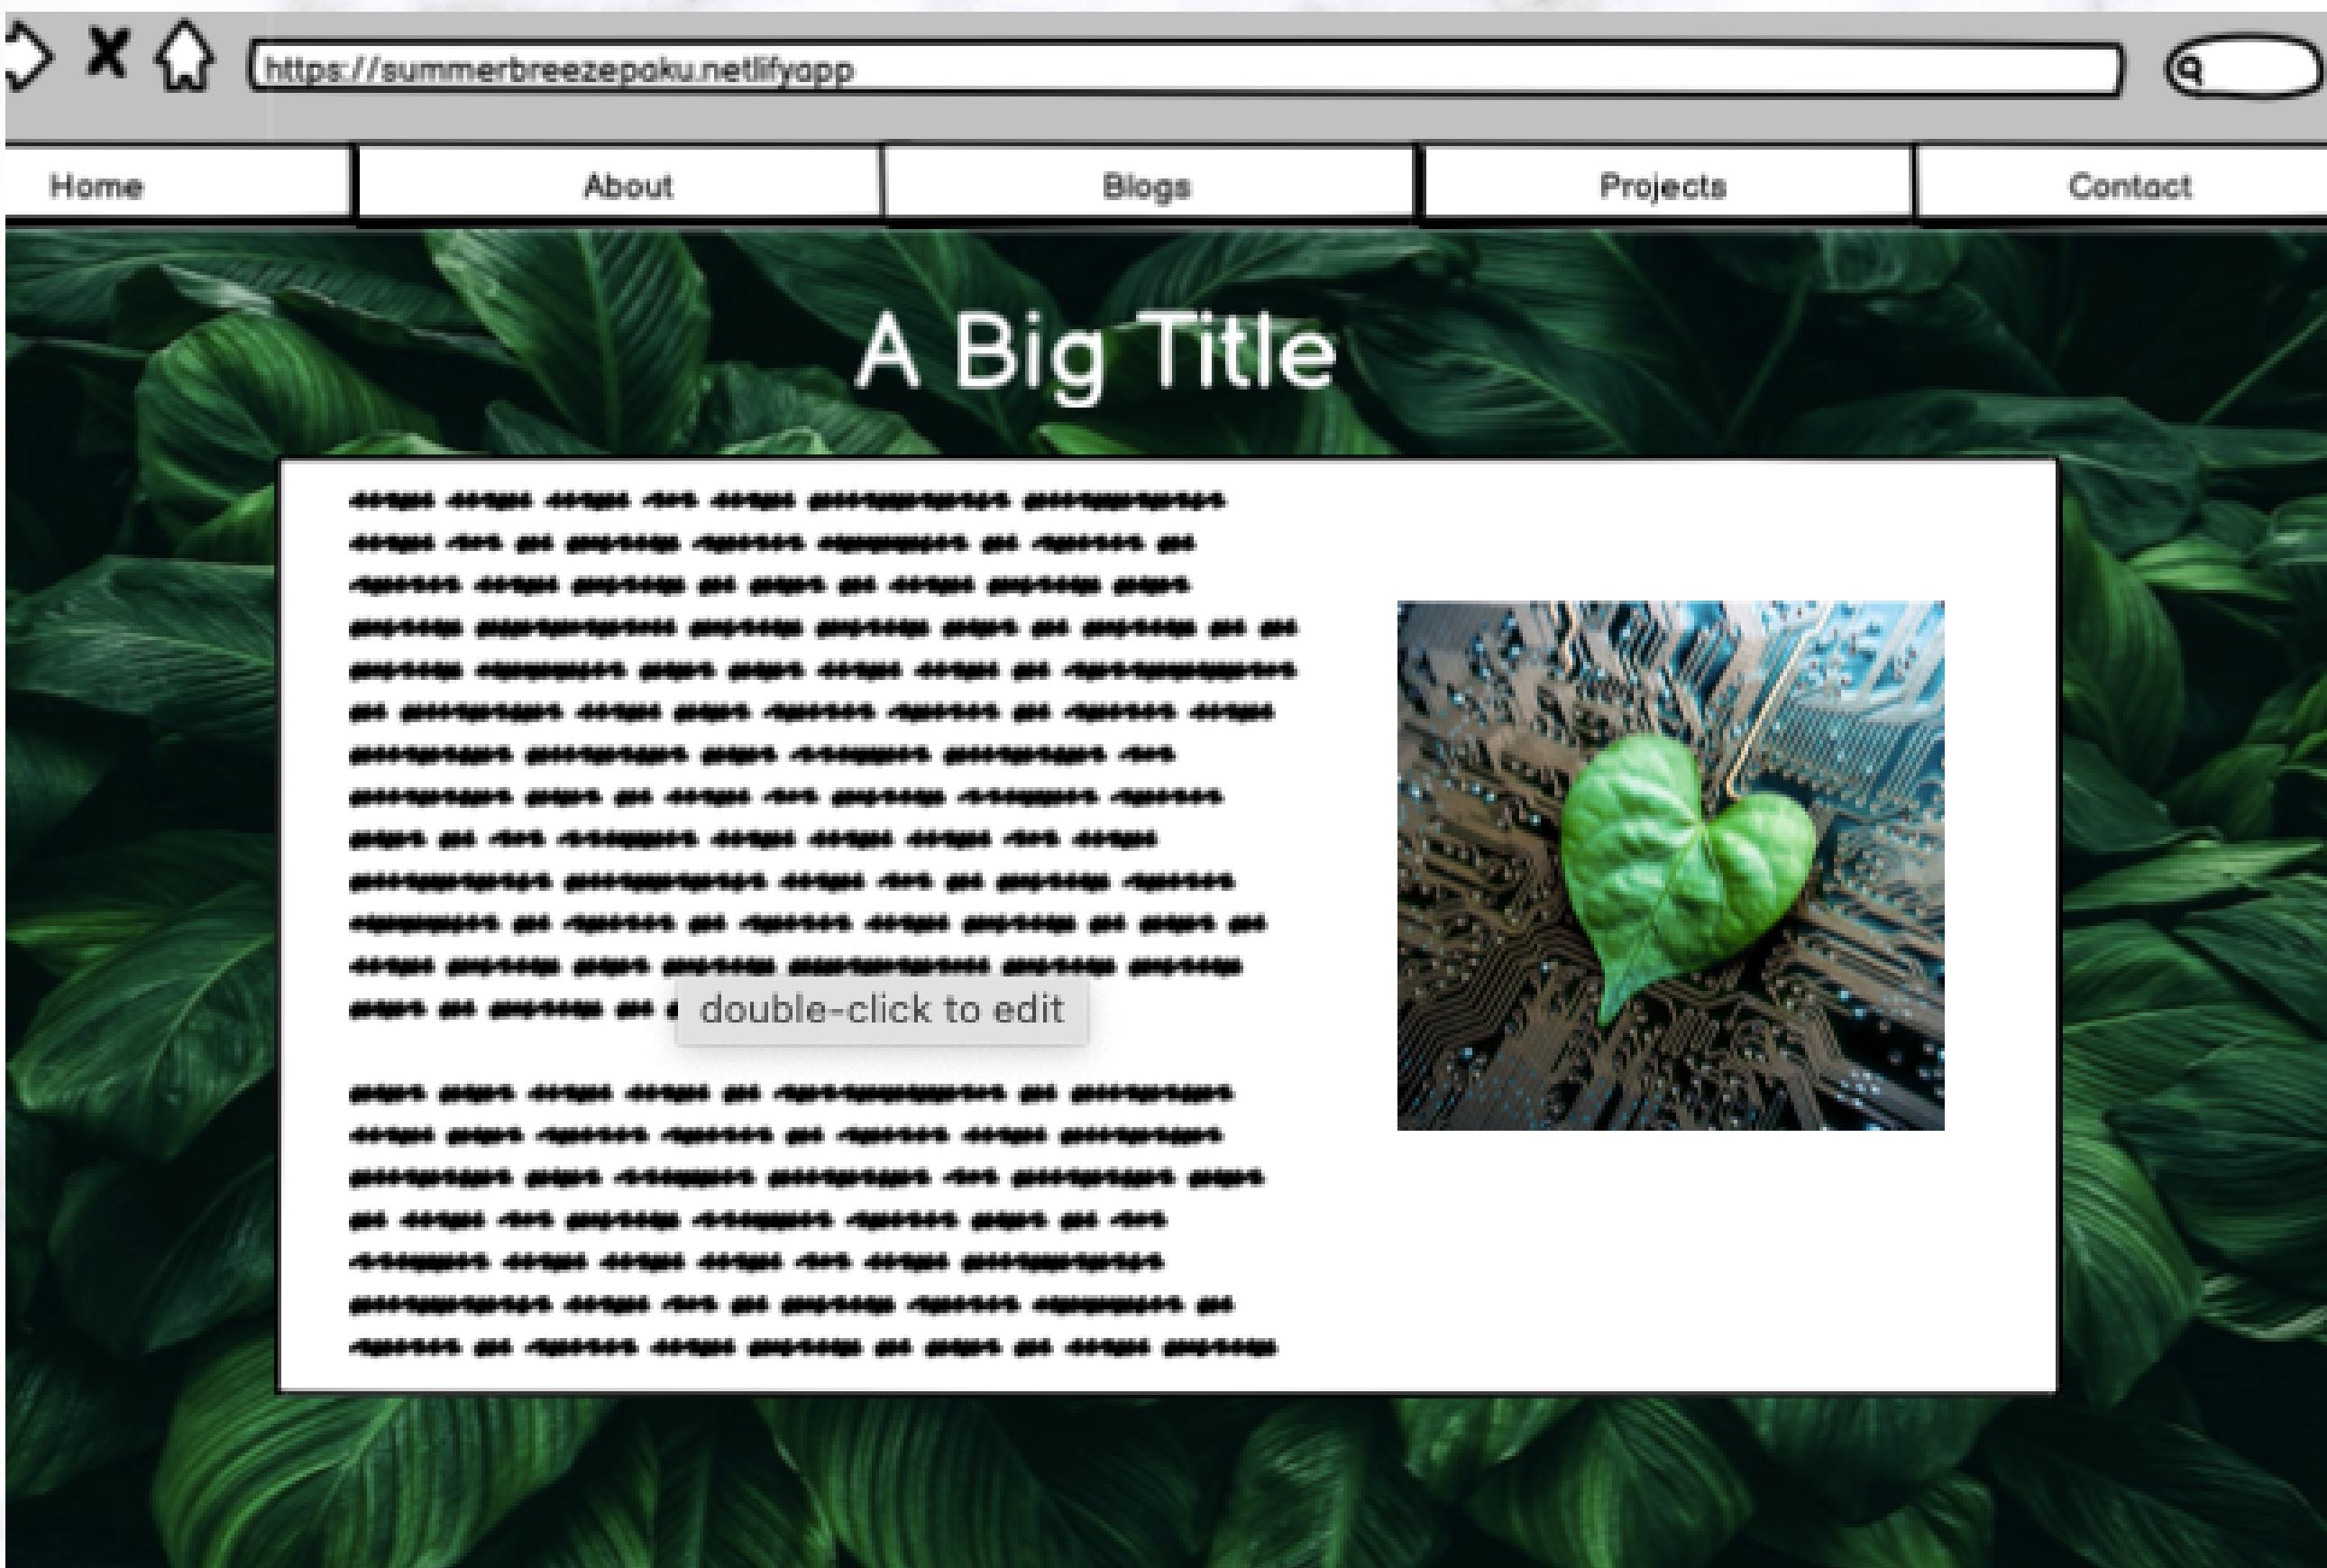

The Design: Wireframes

- kept it simple
- natural elements
- no changes to the palette
- still a wip

The Design: Wireframes

The Design: Wireframes

- simple but still WIP
- no changes to the palette
- natural elements
- cloud back ground
- Green Font
-

The Design: Wireframes

PLANET HER

YouTube Twitter Instagram LinkedIn

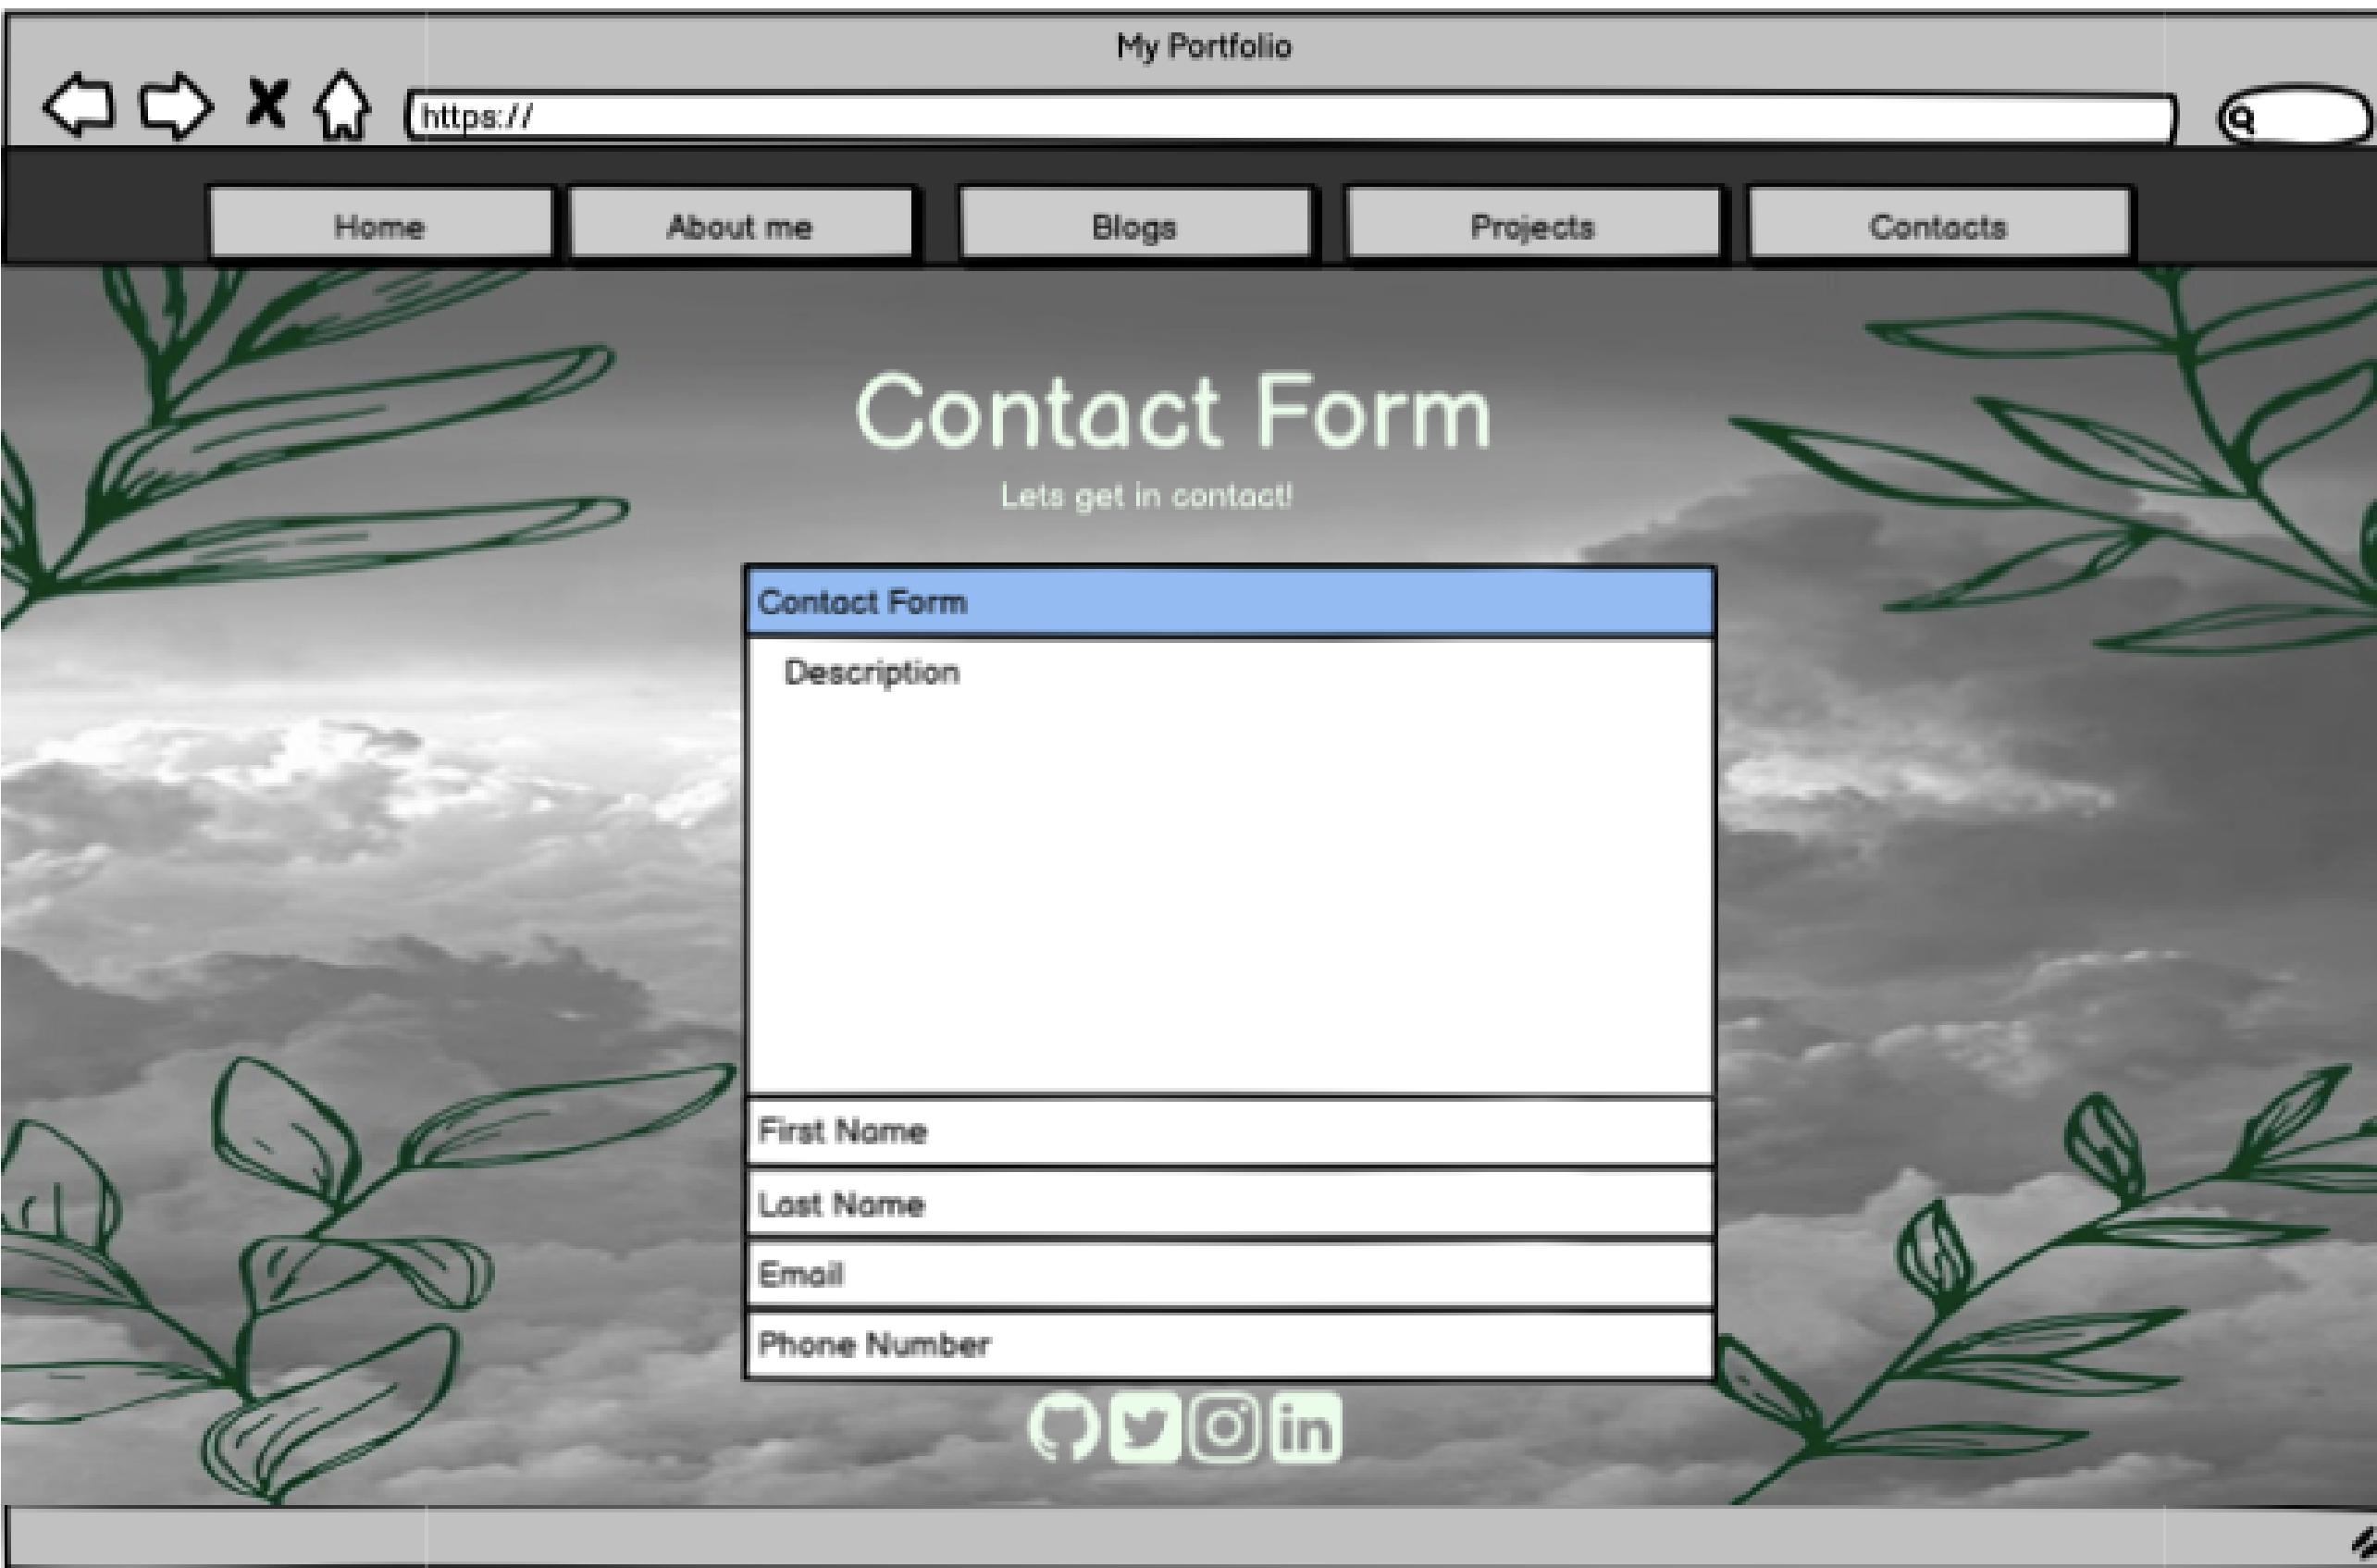

-Images decrease in size (Desktop < Phone)
- Include navbar opacity for all screens
- font-color: cool tone

The Design: Wireframes

continuing with theme of natural elements and grey background with green highlights (fonts, social icons & green leaves)

The Design: Wireframes

The Design: Wireframes

There are still more styles i would like to add to my portfolio and making it more responsiveness but overall Im happy and content with the theme and colours I chose!

Challenges

I went through many blockages and faced many obstacles including:

- After planning i didn't really know how/where to start, by week 3 I only knew how to add a html and css sheet on VS code.
- flex box was a massive hit and miss for me, at times it would work for me and sometimes it would send me into an orbit.
- learning and creating at the same time;
- having to refer back to my css and html sheets got confusing even with comments labels.
- My design is constantly changing
- I easily got overwhelmed from all the coding that I would get lost and felt like my brain was going to explode.
- I would have a lot of mental blocks on how to do certain things and had to refer back to google or YouTube tutorials... I even forgot how to add colour to my fonts.
- having to figure out where i went wrong when my responsive components stopped being responsive
- my background Images are loading slowly and its not ideal.

What I liked about it

- I overcame my issues with Flexbox and resolved our relationship
- I learnt new css functions and a pattern in when creating the website layout.
- I'm more confidence in coding and creating websites and understanding html & CSS.
- I learnt so many things about myself: I'm a perfectionist, I have a strong attention to detail
- even through all the challenges I have faced I'm still willing to understand and resolve the issues, to not give up and be more patient with myself as a beginner.
- Identifying when to have a break after feeling overwhelmed.
- Having to learn and create something at the same time was also very satisfying and I felt like I've accomplished so much
- I've come along way from beginning with zero knowledge in web developing
- with quite a few time constraints I still felt like I achieve a lot in a short time frame and look forward to spending the rest of the week fixing it up and adding more sprinkles to my donut.

Thank
you!
